

GT-Suite 加密

➤ 李书泽

所属: CDAJ-China

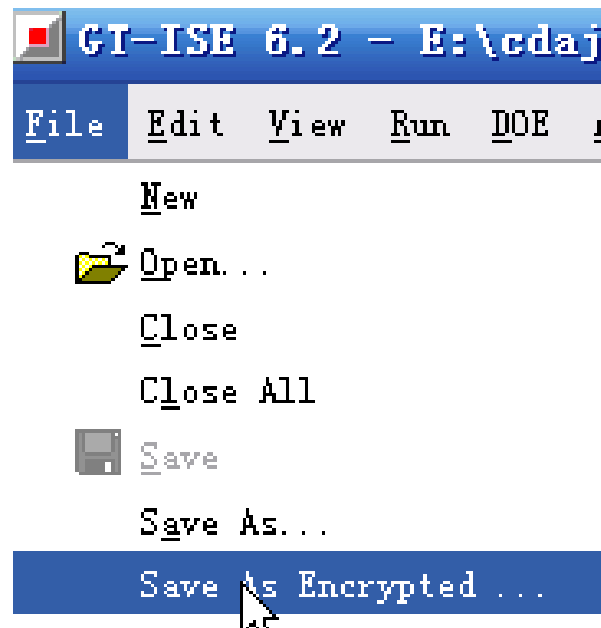

概述

- GT-Suite的SubAssembly可以进行加密
- 加密时需要分别设置不同的运行密码和管理员密码
- 这样提供运行密码给主模型使用，进行模型运行。而无法打开加密模型进行更改。

加密过程

- 点击File菜单下Save As Encrypted

加密过程

- 分别输入运行(上面两空白行)和管理员(下面两空白行)密码
- 点击OK按钮确认。

Enter Run-Simulation and Administrator Pas...

NOTE: When using an encrypted model, please review the comments from the main model to ensure that they do not contain sensitive information. The comments can be reviewed by opening the main model and then Assembly->Assembly Properties.

Run-Simulation Password

The Run-Simulation Password enables a model that calls an encrypted subassembly to run, but does not provide any access to the model inputs or results. This password must be provided to anyone who is expected to use the encrypted subassembly, and should be entered in the 'SubAssemblyExternal' component in the model that calls the encrypted subassembly.

Run-Simulation Password:

Confirm Run-Simulation Password:

Administrator Password

The Administrator Password, used together with the Run Simulation Password, enables the encrypted model to be opened in GT-ISE (fully decrypted). This password should NOT be provided to anyone unless they should have full access to the contents of the file.

Administrator Password:

Confirm Administrator Password:

OK **Cancel**

加密文件的使用

- 加密文件作为主运行文件的外部SubAssembly使用（本例加密文件为aaa.gtm）
- 在其属性中的Run-Simulation Password for Encrypted Files填入前面设置的运行密码。
- 主模型即可运行。

Edit Object: rmu-001

Template: SubAssemblyExternal

Object: rmu-001

Comment:

Attribute	Unit	Object Value
Subassembly File Name (*.gtm)		<aaa.gtm>
Run-Simulation Password for Encrypted F...		aaaaa
Password for Subassembly Output -v6.1 E...		ign
