

# iconCFD® v4.0

## New Features

A summary of the new features  
which will be available in iconCFD 4.0

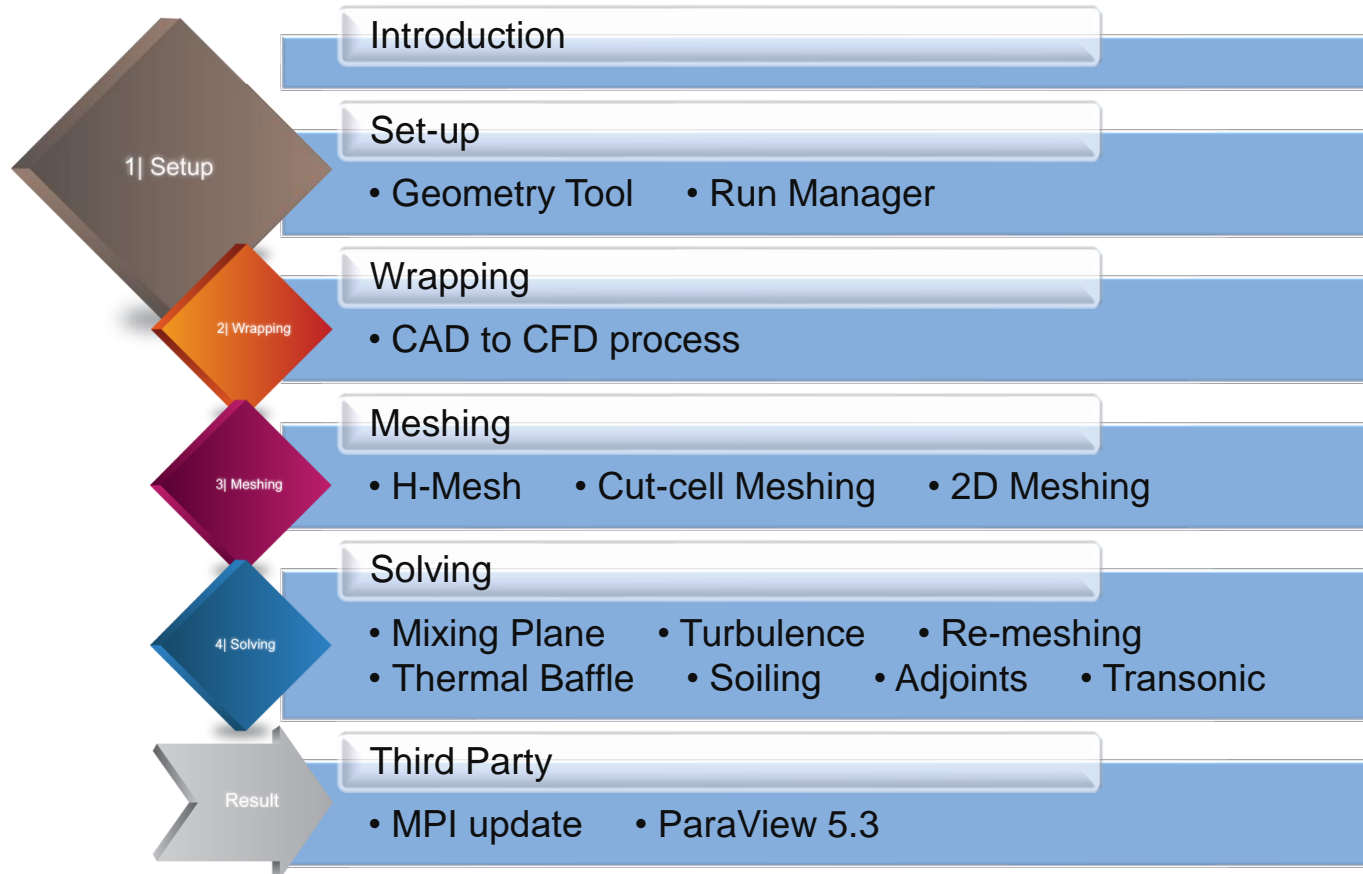

David Winkler  
[d.winkler@iconcf.com](mailto:d.winkler@iconcf.com)  
November 2017

Modularized ● Industrialized ● Customized

# iconCFD v4.0

## AGENDA

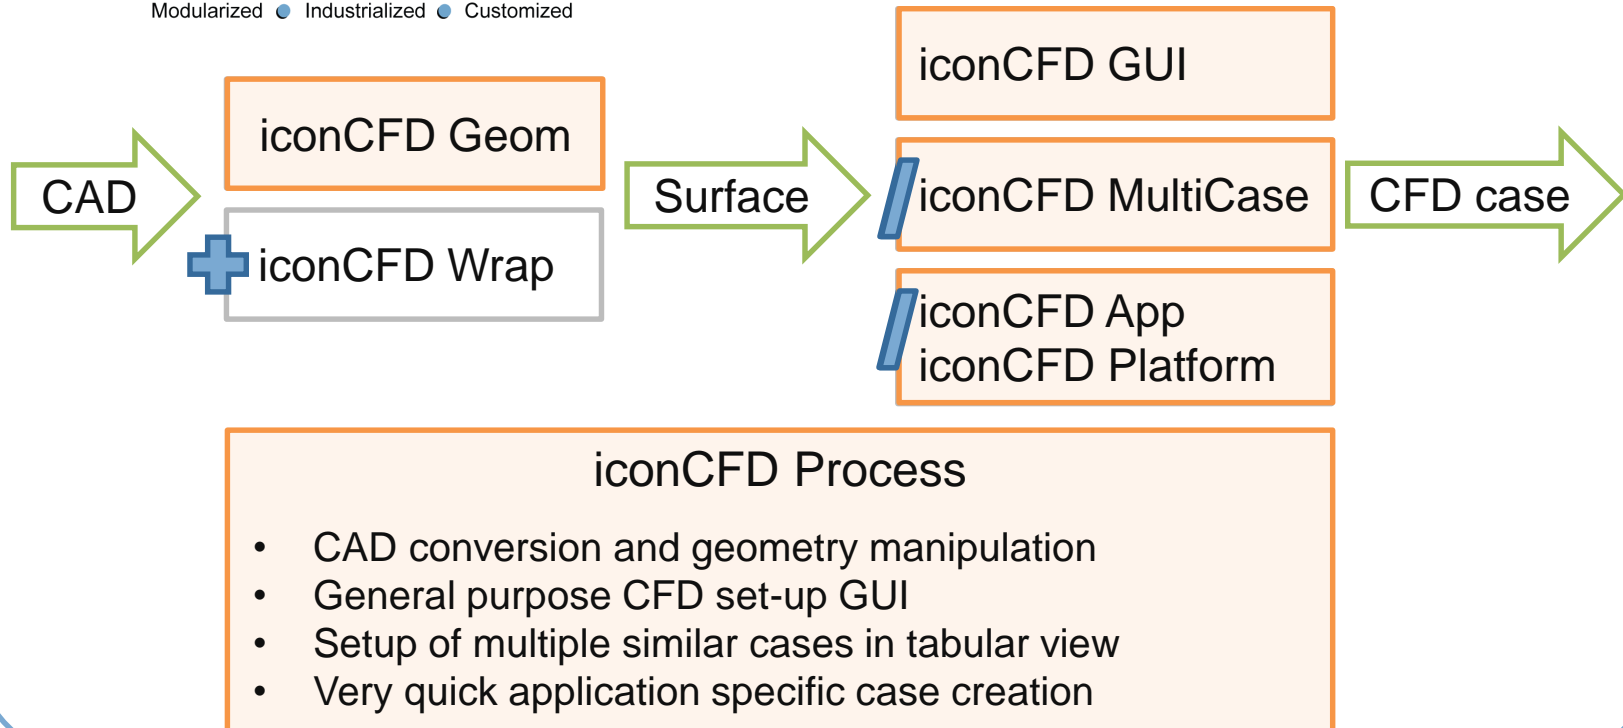

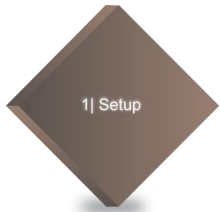

# iconCFD PROCESS

## CASE SETUP WORKFLOW

Modularized • Industrialized • Customized

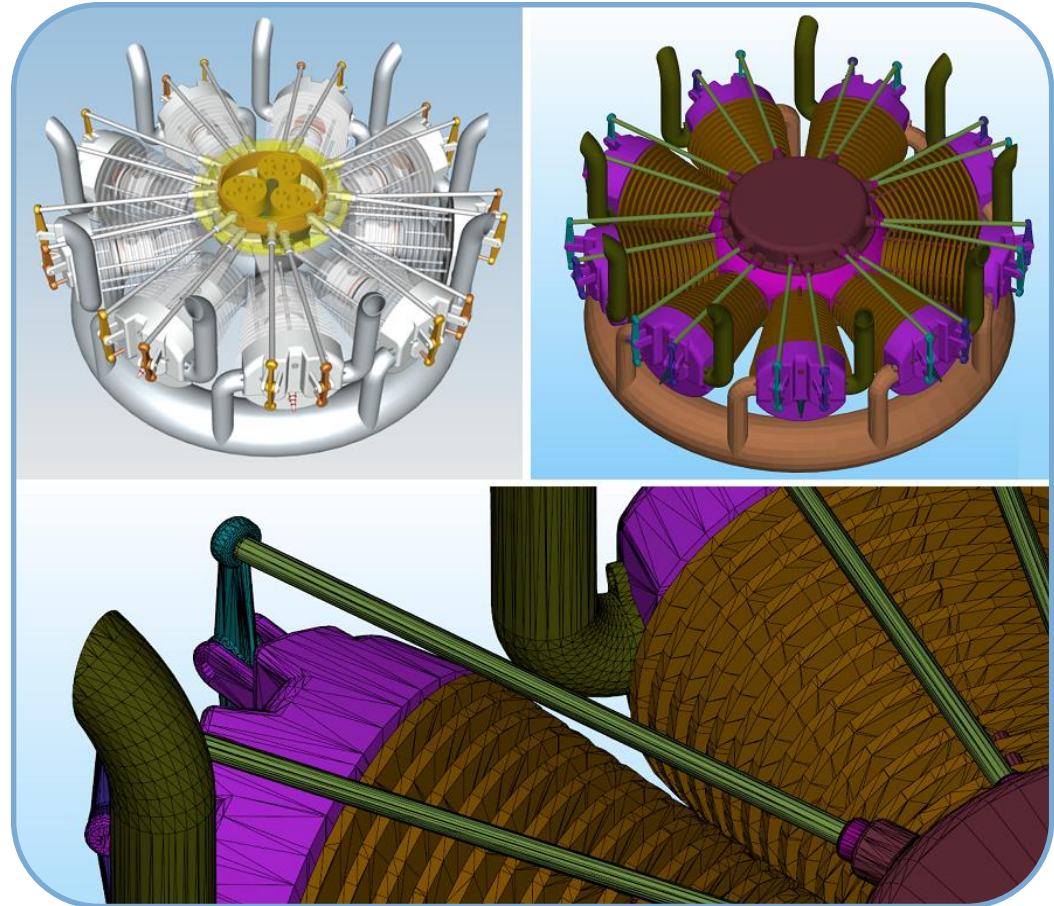

# iconCFD PROCESS

## GEOM TOOL

[www.iconCFD.com](http://www.iconCFD.com)

- Geometry pre-processing
  - Import and triangulate CAD data
    - IGES, STEP, JT
  - Modify triangulated surface data
    - STL, VTK, NASTRAN, OBJ
  - Assign patch IDs
  - Transform and copy parts
  - Detect and stitch leaks
  - Fill holes, connect edges
  - Manipulate surfaces
  - Adjust surface normals

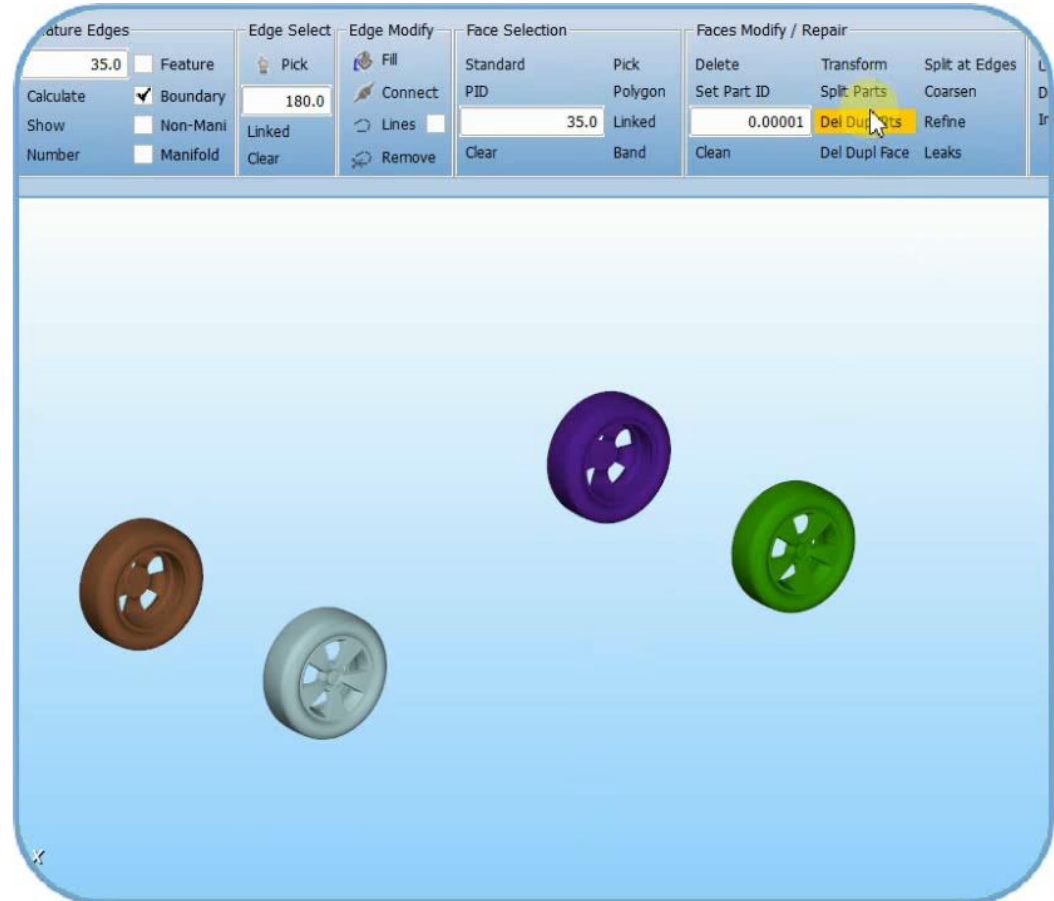

# iconCFD PROCESS

# iconCFD PROCESS

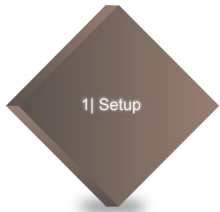

## GEOM TOOL

[www.iconCFD.com](http://www.iconCFD.com)

- Geometry pre-processing
  - Create surfaces for computational domain, cell or face zones
    - (Rotated) Bounding box
    - Convex object around part
    - Surface offset
    - Rotational volumes
- Support Aero-CFD case setup with calculations of
  - Distance
  - Projected frontal area
  - Surface area and normal
- Surface morphing
  - Based on adjoint sensitivities

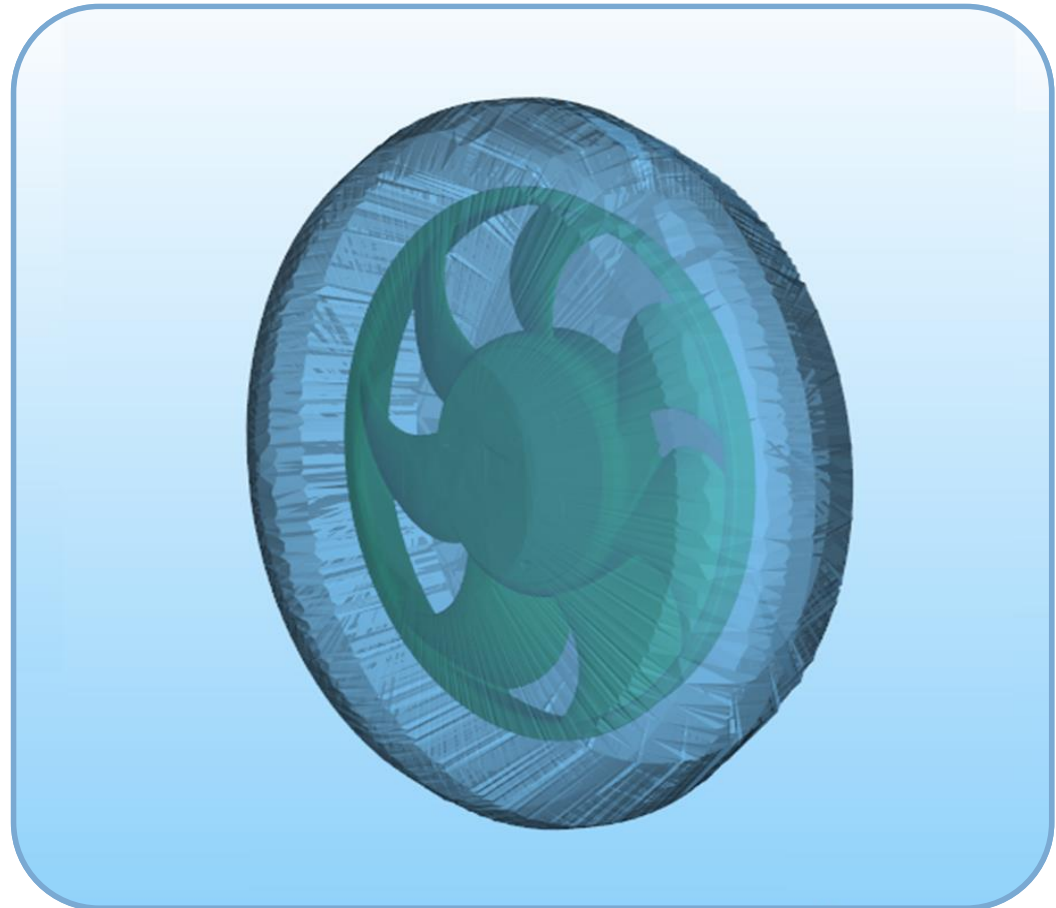

# iconCFD PROCESS

# iconCFD PROCESS

## ICONCFD GUI

[www.iconCFD.com](http://www.iconCFD.com)

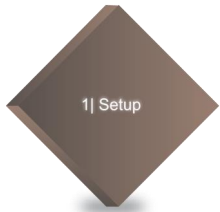

### ● Purpose:

- Set up (mesh and solver) and run iconCFD cases

### ● New Key Feature: Run Manager

- Resource Library
- Job and Workflow Libraries
- Python API

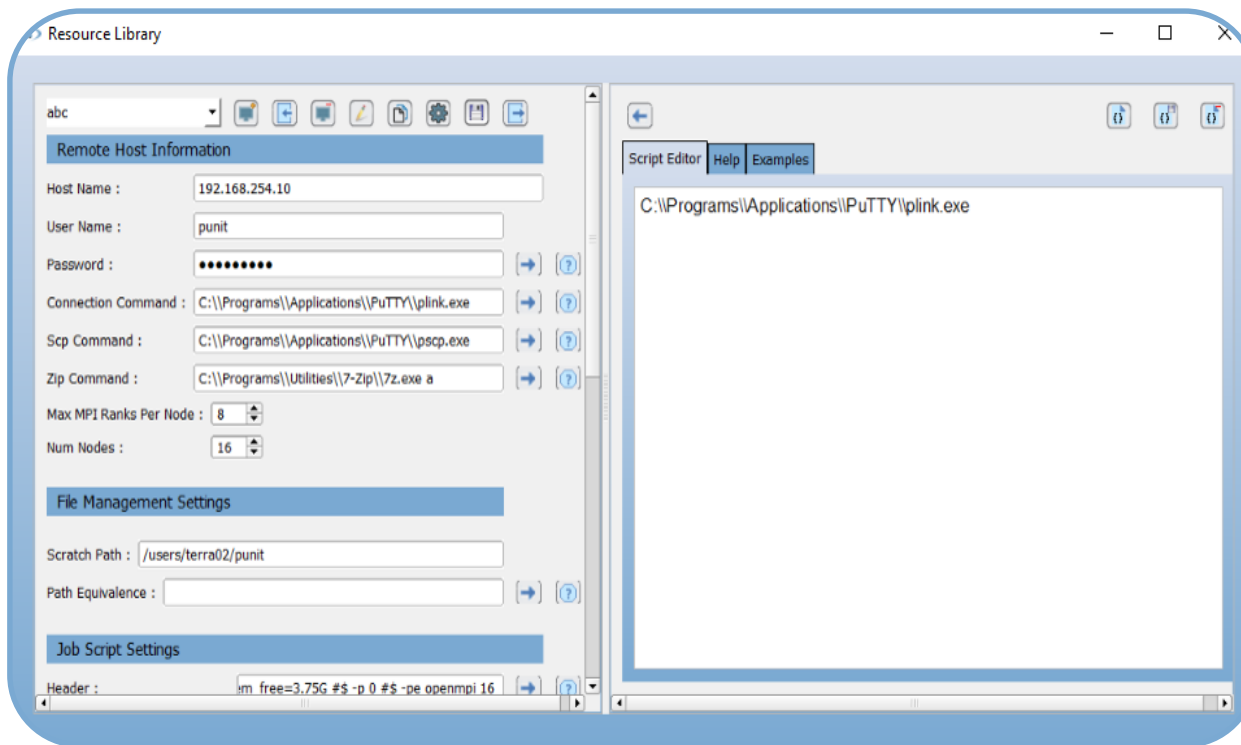

# iconCFD PROCESS GUI – RUN MANAGER

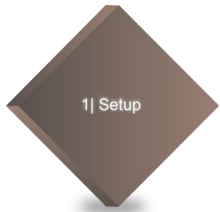

[www.iconCFD.com](http://www.iconCFD.com)

## ● Resource Library:

- Definition of resources, i.e. specifications of machines to submit to, how to run, etc.

- Host settings
- Job settings
- Submit script
- Set-up by IT or expert user
- Script editor
- Detailed help menu
- Examples

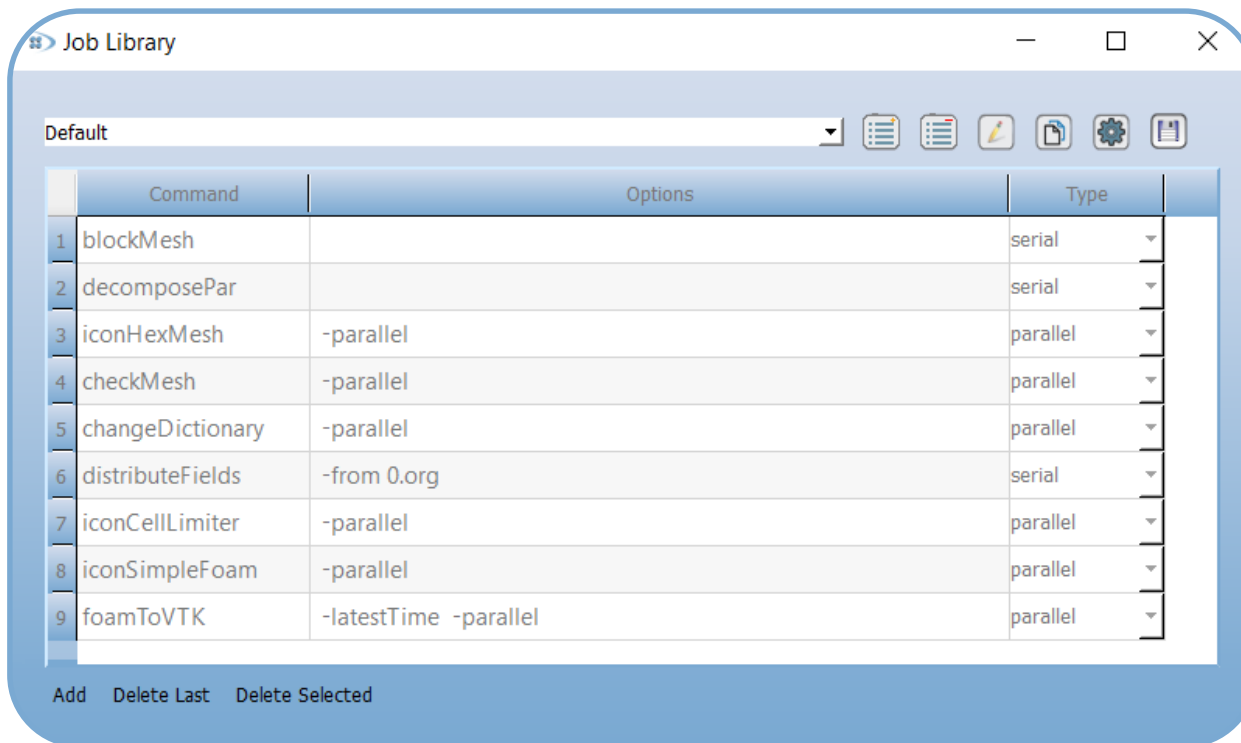

# iconCFD PROCESS

## GUI – RUN MANAGER

[www.iconCFD.com](http://www.iconCFD.com)

### ● Job Library:

- Generic interface to allow specification of job types

- List of commands to run a single job

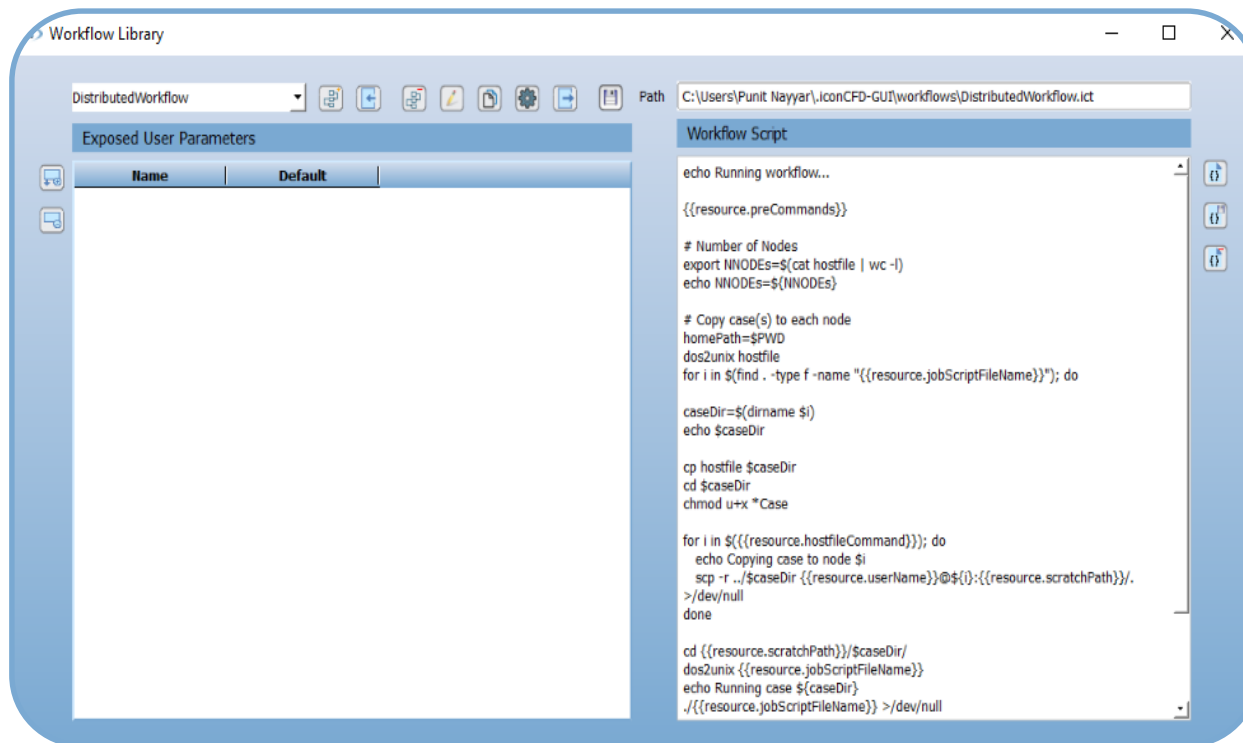

# iconCFD PROCESS

## GUI – RUN MANAGER

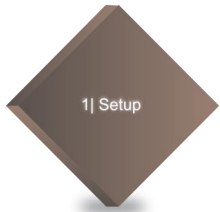

[www.iconCFD.com](http://www.iconCFD.com)

### Workflow Library:

— Generic interface to allow specification of workflow types

- Multiple simulation jobs in one run
  - Sequential jobs
  - Steady – transient
  - Primal – adjoint
- Set-up by expert user
- Important parameters exposed to user

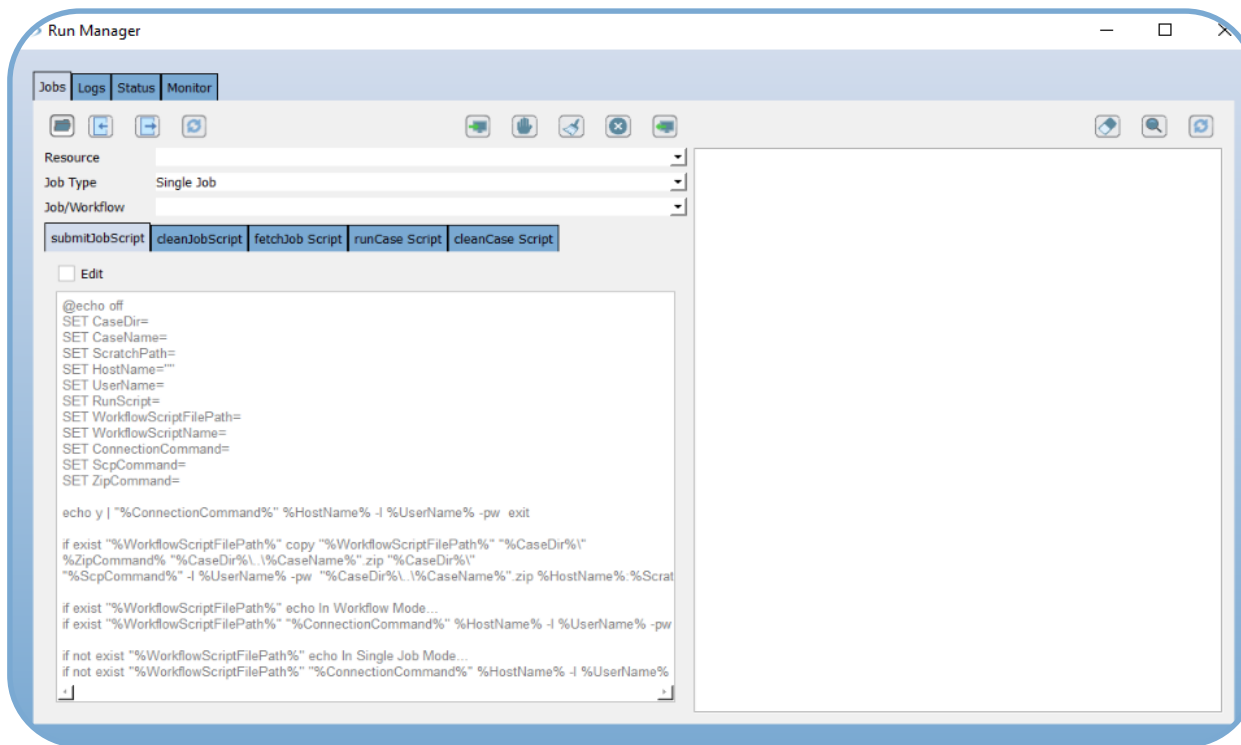

# iconCFD PROCESS

## GUI – RUN MANAGER

[www.iconCFD.com](http://www.iconCFD.com)

### ● Run Manager:

- Main interface

- Select case path
- Pick resource
- Pick job/workflow type
- Submit job
- Scripts can be edited
- Python API: main components of Run Manager can be invoked by user in Python script

# iconCFD PROCESS

## GUI – RUN MANAGER

[www.iconCFD.com](http://www.iconCFD.com)

### ● Run Manager:

- Main interface

```
#!/usr/bin/env python
```

```
##- Demo script demonstrating how to use the Run Manager Python API
```

```
import libIconRunManager as rm  
import os
```

```
##- Create run object  
run = rm.Run()
```

```
##- Select machine to submit job to  
run.listResources()  
run.setResource('zephyr_ic3121')  
run.getResourceName() #for confirmation
```

```
##- Select single-job type  
run.listJobTypes()  
run.setJobType('Default', rm.runType.JOB)  
run.getJobName() #for confirmation
```

```
##- Run job
```

```
os.environ['ICONCFD_GUI_ROOT'] = '/c/Users/Punit Nayyar/WORK/PROJECTS/ICON/iconCFD  
Process/Code/iconCFD-develop/install'  
run.run('/c/Users/Punit Nayyar/WORK/PROJECTS/ICON/iconCFD Process/Code/Test')
```

Import the module

Instantiate an object of the Run Manager

Select the resource

Select the job type (single job or workflow)

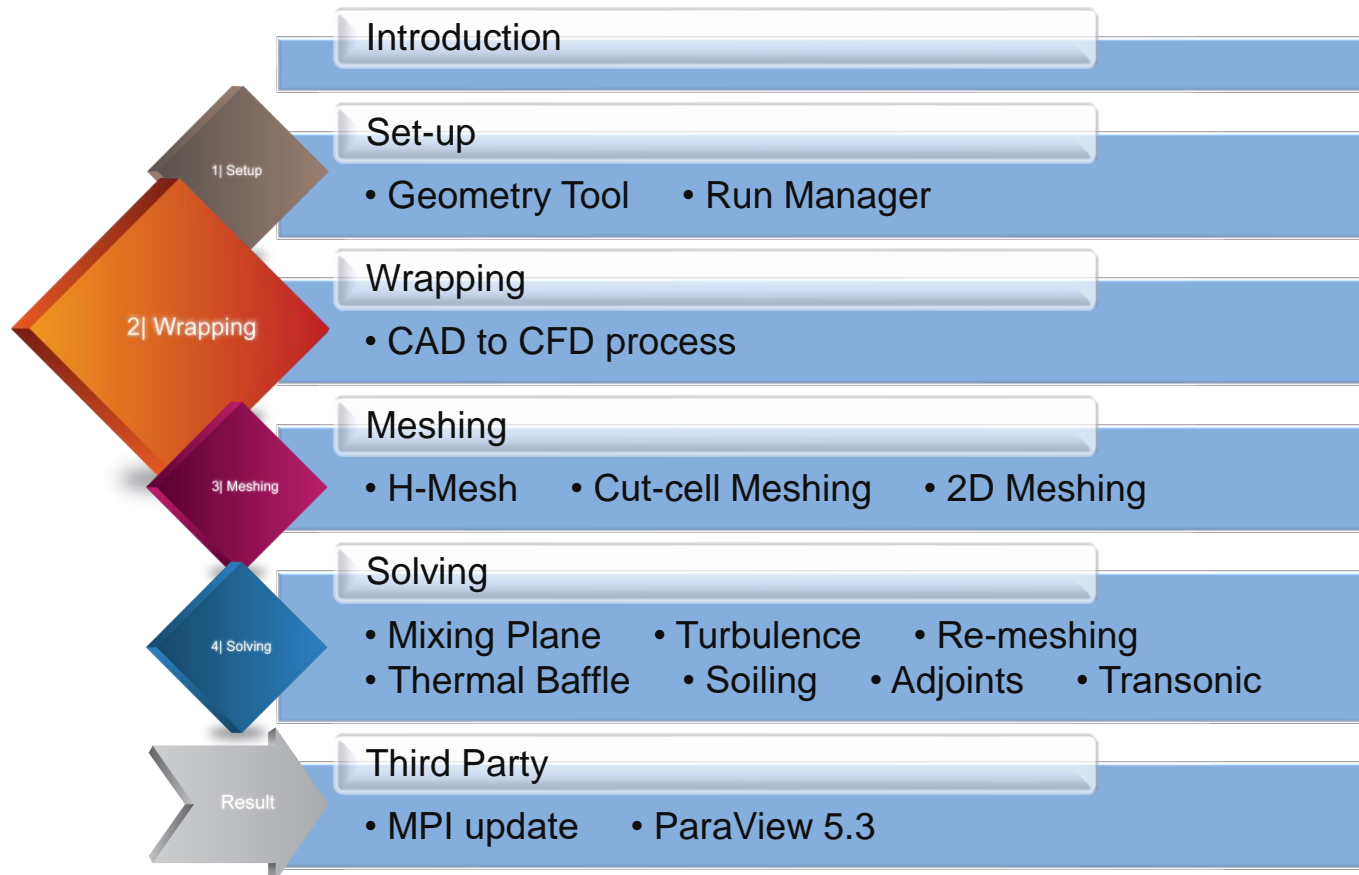

Set ICONCFD\_GUI\_ROOT env

Submit job

- Select case path
- Pick resource
- Pick job/workflow type
- Submit job
- Scripts can be edited
- Python API: main components of Run Manager can be invoked by user in Python script

# iconCFD v4.0

## AGENDA

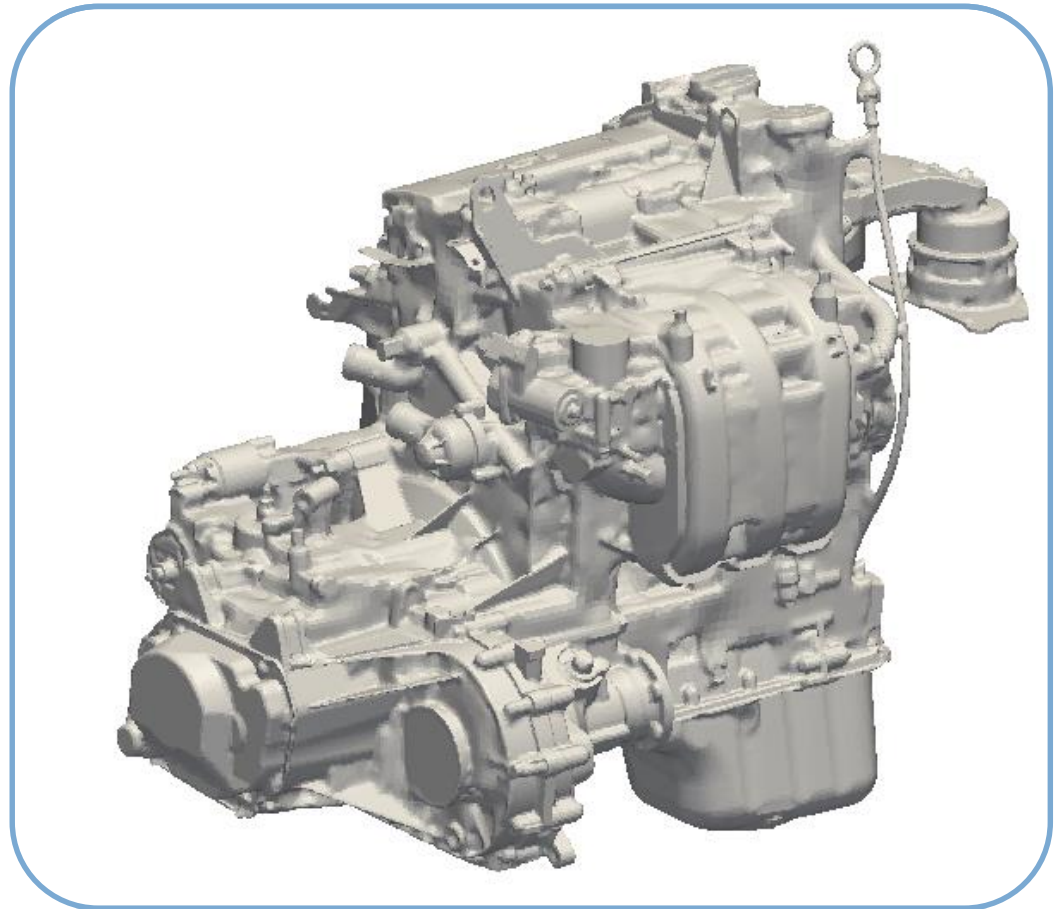

# iconCFD WRAP

## CAD TO CFD PROCESS

[www.iconCFD.com](http://www.iconCFD.com)

### ● CAD to CFD

- CAD triangulation and minimal surface mesh preparation with iconCFD Geom
- Automatic surface wrapping with iconHexMesh-based approach in iconCFD Wrap
- Case creation with iconCFD Gui or iconCFD MultiCase
- Hexa-dominant meshing with iconCFD Mesh

# iconCFD WRAP

## CAD TO CFD PROCESS

[www.iconCFD.com](http://www.iconCFD.com)

### SUMMARY from CAD to CFD:

CAD Preparation = 15min

Wrapping = 2h16min

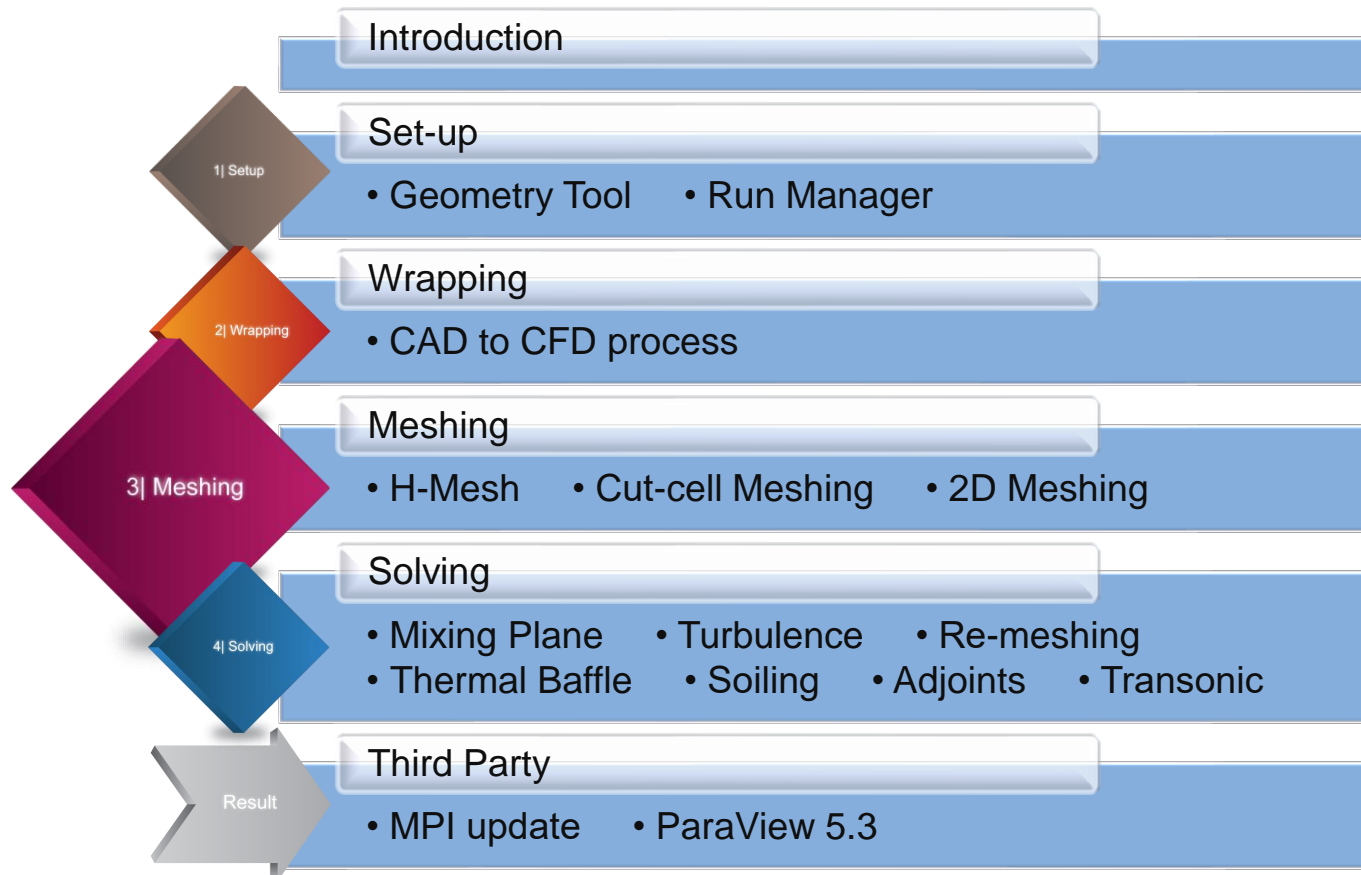

Case creation = 5min

Meshing= 1h37min

**TOTAL = 4h14min**

# iconCFD v4.0

## AGENDA

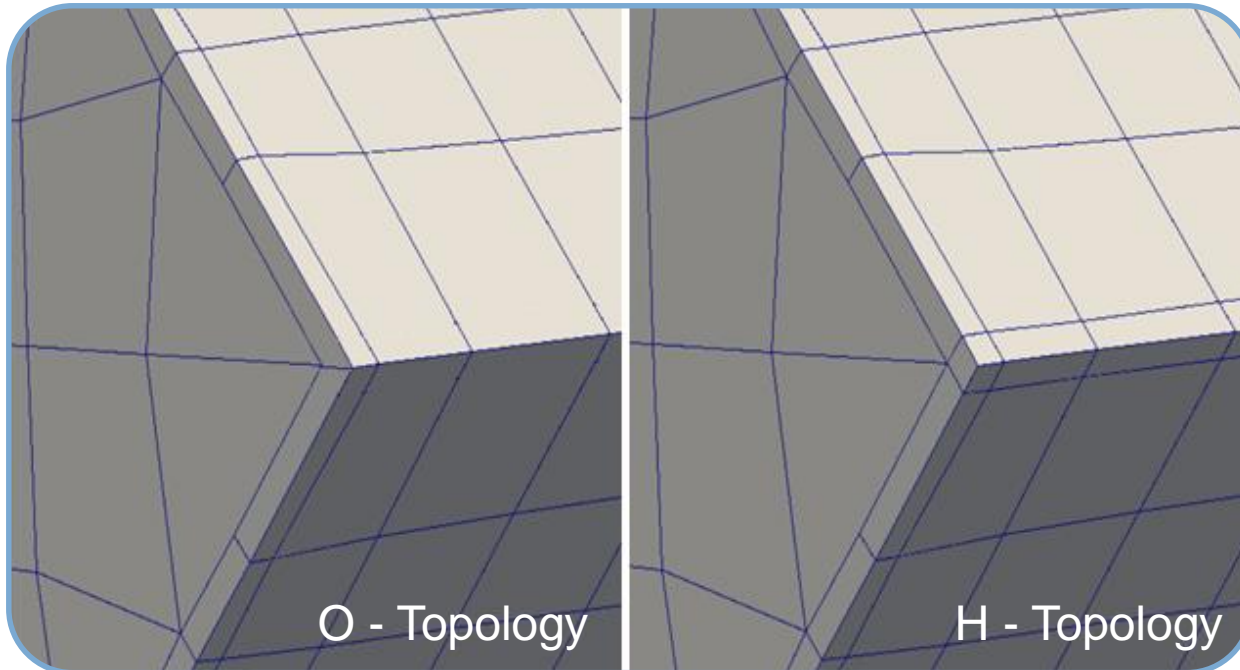

# iconCFD MESH

## H-MESH

[www.iconCFD.com](http://www.iconCFD.com)

- H-topology layer mesh in concave corners
  - Improve quality and accuracy of boundary layer flow simulation
  - Structured-style layer mesh automatically generated in concave corners

- Topology automatically transitions from O to H-topology
- Based on angle between adjacent face normals
- Fully parallelised algorithm with minimal user input

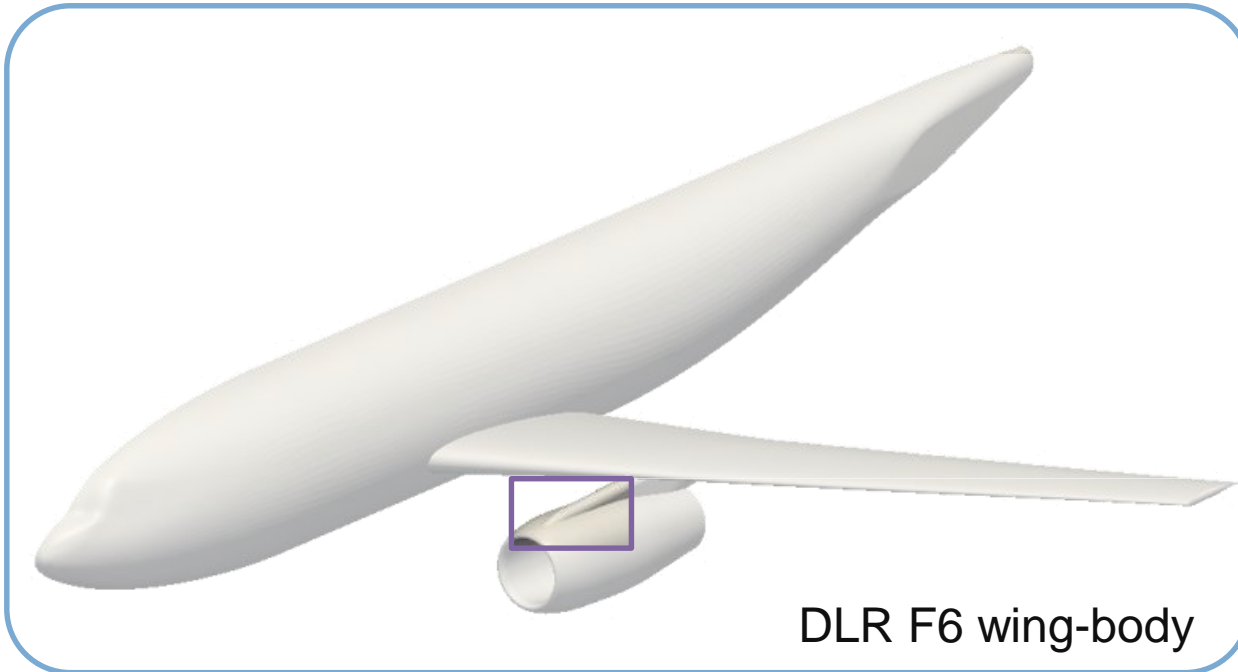

# iconCFD MESH

## H-MESH

[www.iconCFD.com](http://www.iconCFD.com)

- H-topology layer mesh in concave corners
  - Improve quality and accuracy of boundary layer flow simulation
  - Structured-style layer mesh automatically generated in concave corners

DLR F6 wing-body

- Topology automatically transitions from O to H-topology
- Based on angle between adjacent face normals
- Fully parallelised algorithm with minimal user input

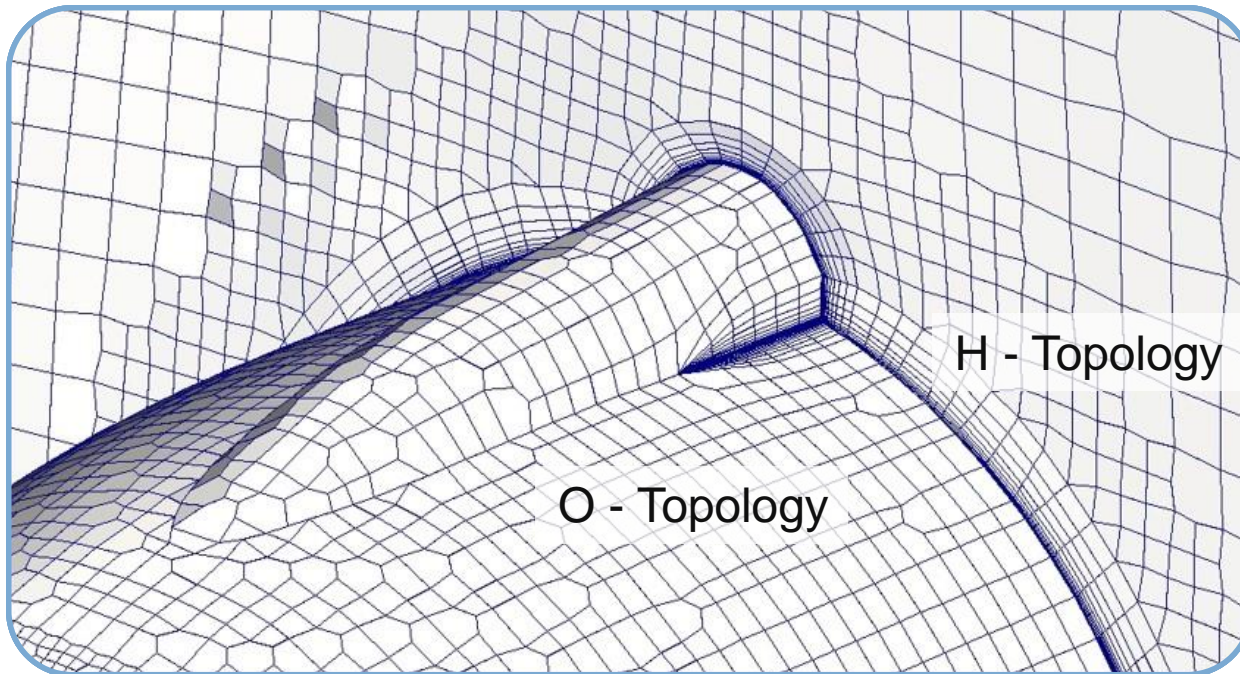

# iconCFD MESH

## H-MESH

[www.iconCFD.com](http://www.iconCFD.com)

- H-topology layer mesh in concave corners
  - Improve quality and accuracy of boundary layer flow simulation
  - Structured-style layer mesh automatically generated in concave corners

- Topology automatically transitions from O to H-topology
- Based on angle between adjacent face normals
- Fully parallelised algorithm with minimal user input

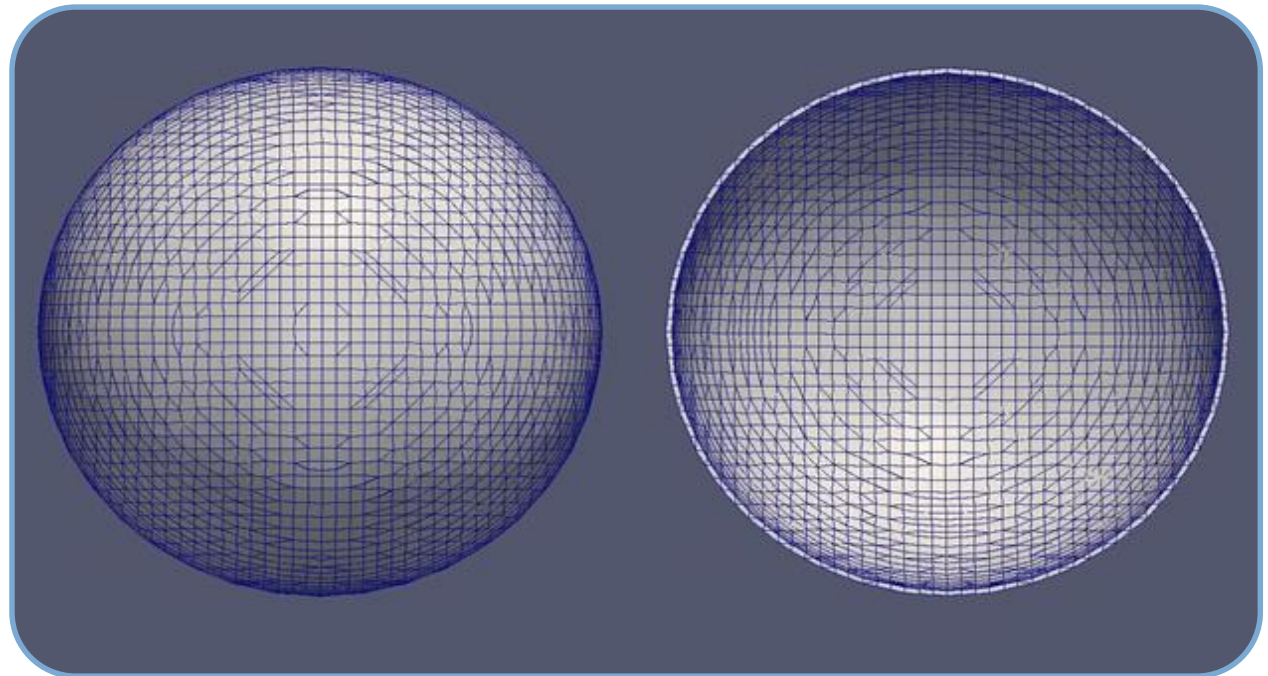

# iconCFD MESH

## CUT-CELL MESHING

[www.iconCFD.com](http://www.iconCFD.com)

- Cut cells at surfaces instead of snapping
  - Improved mesh quality due to less distortion
  - Advantageous for face zones, narrow gaps, high fidelity meshes with good quality
- Cells are cut
- Cells outside domain are removed
- Surface layers are added

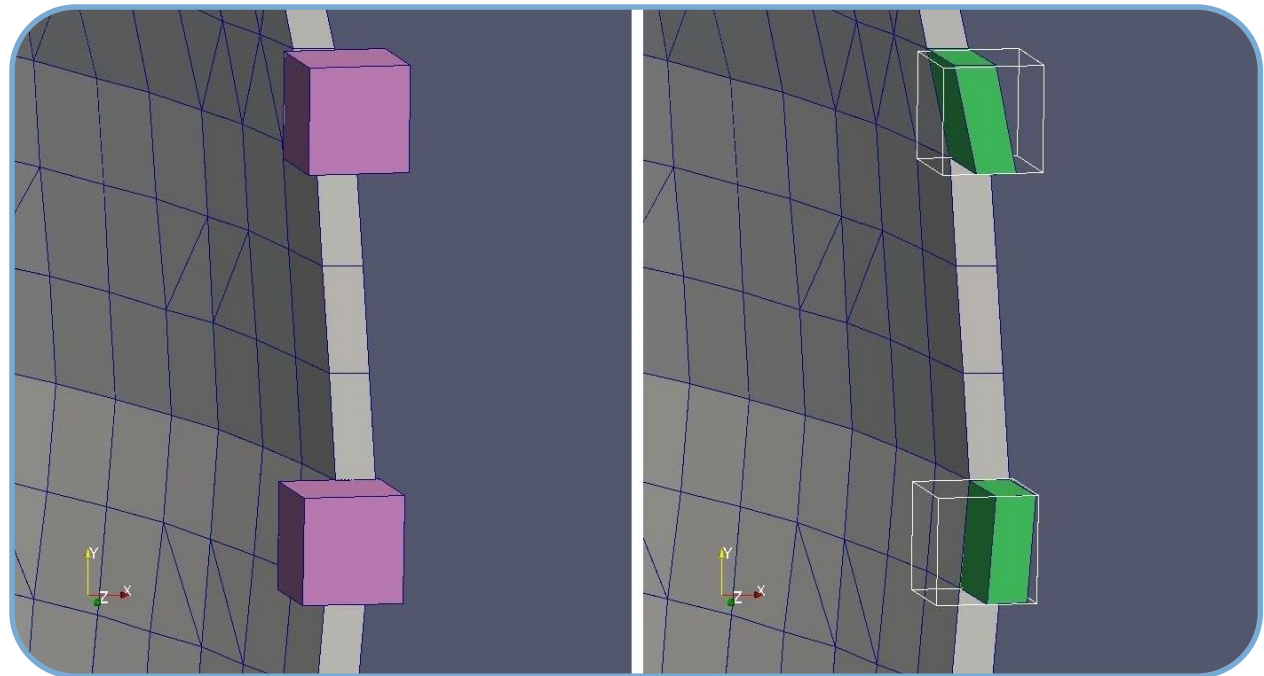

# iconCFD MESH

## CUT-CELL MESHING

[www.iconCFD.com](http://www.iconCFD.com)

- Cut cells at surfaces instead of snapping
  - Improved mesh quality due to less distortion
  - Advantageous for face zones, narrow gaps, high fidelity meshes with good quality
- Cells are cut
- Cells outside domain are removed
- Surface layers are added

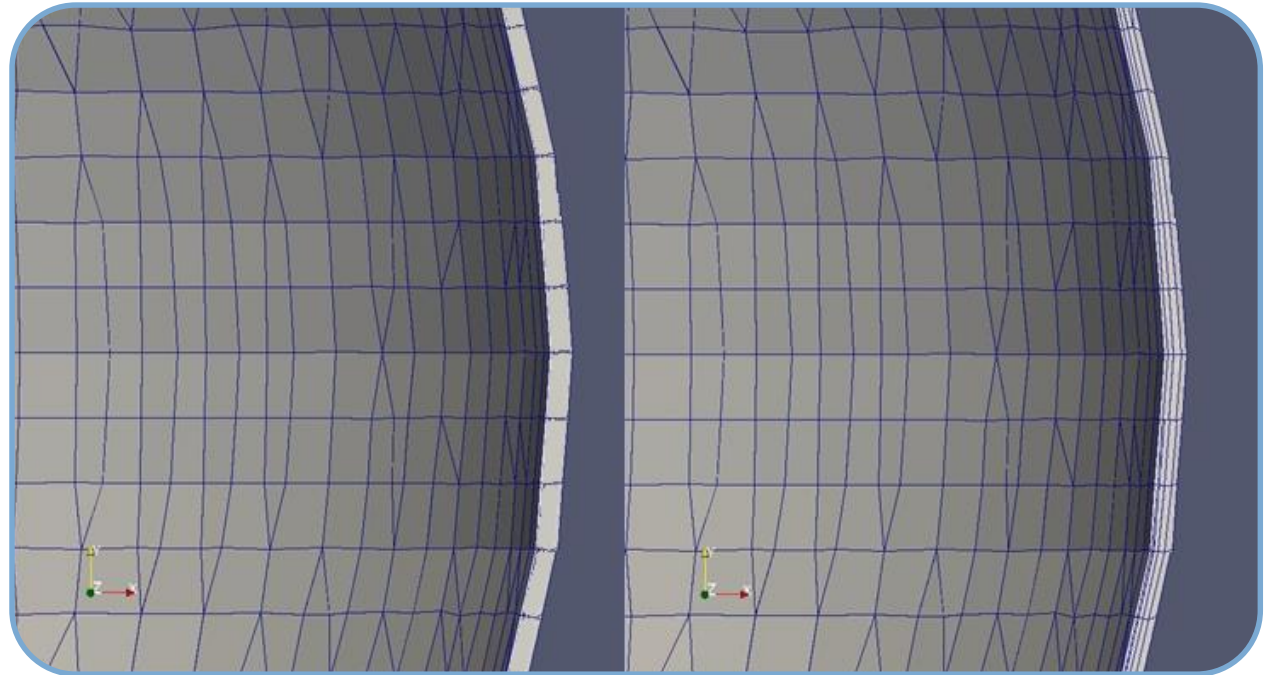

# iconCFD MESH

## CUT-CELL MESHING

[www.iconCFD.com](http://www.iconCFD.com)

- Cut cells at surfaces instead of snapping
  - Improved mesh quality due to less distortion
  - Advantageous for face zones, narrow gaps, high fidelity meshes with good quality
- Cells are cut
- Cells outside domain are removed
- Surface layers are added

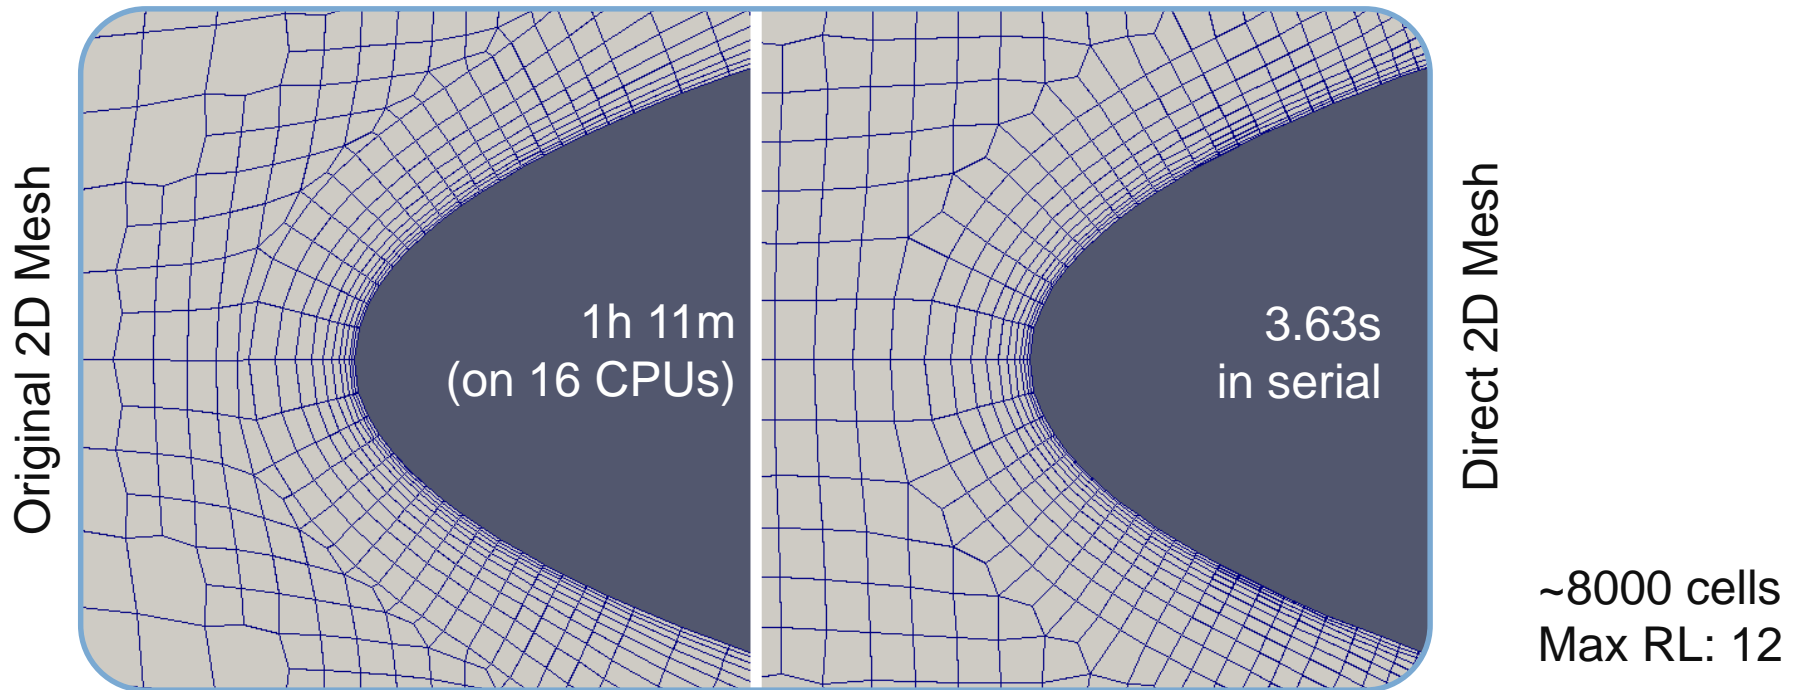

# iconCFD MESH

## DIRECT 2D MESHING

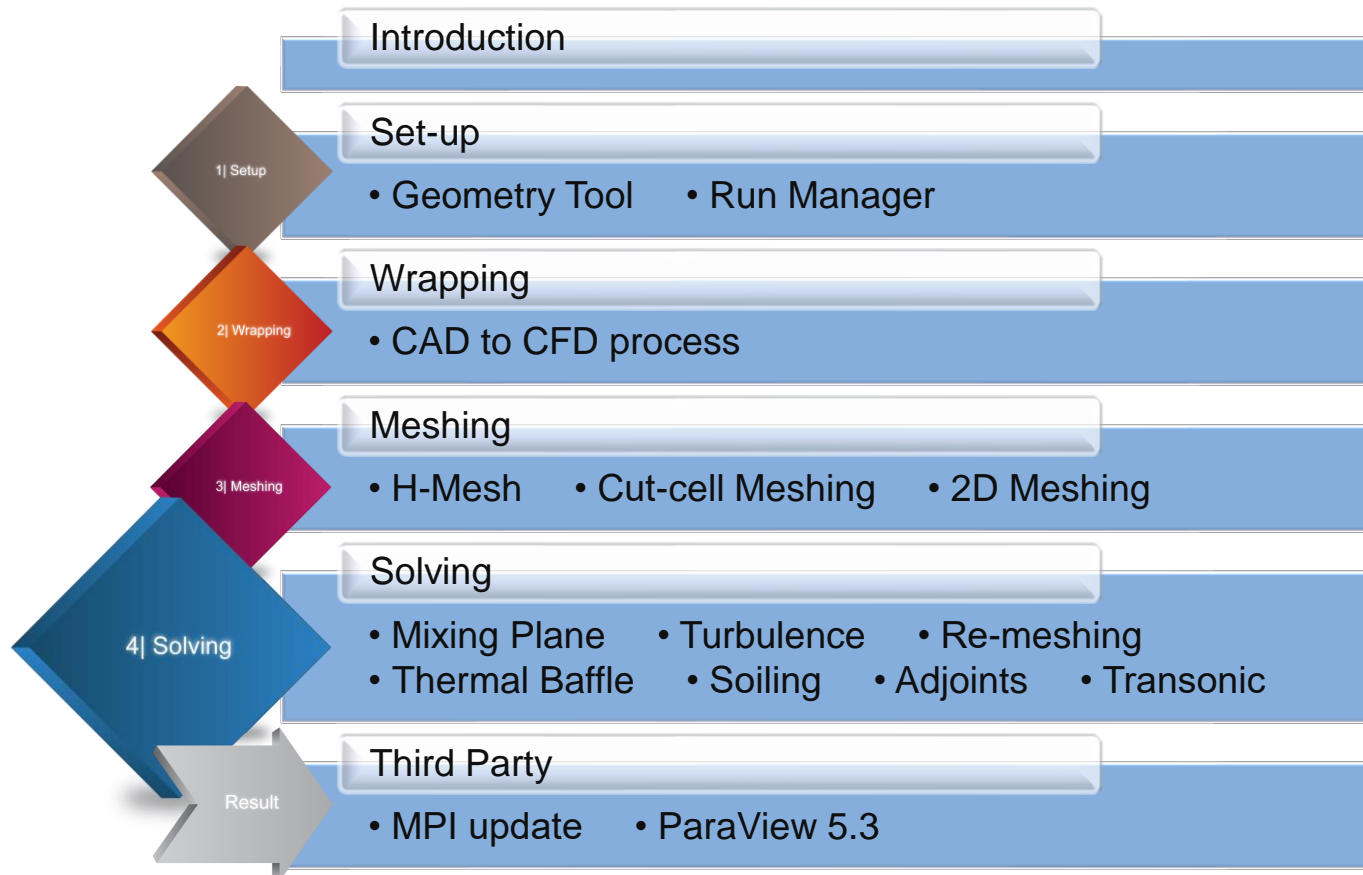

[www.iconCFD.com](http://www.iconCFD.com)

- Mesh directly in 2D, instead of generating 3D mesh and then extruding 2D mesh from a patch
  - Refinement, snapping and layering now performed in 2D

# iconCFD v4.0

## AGENDA

# iconCFD CORE

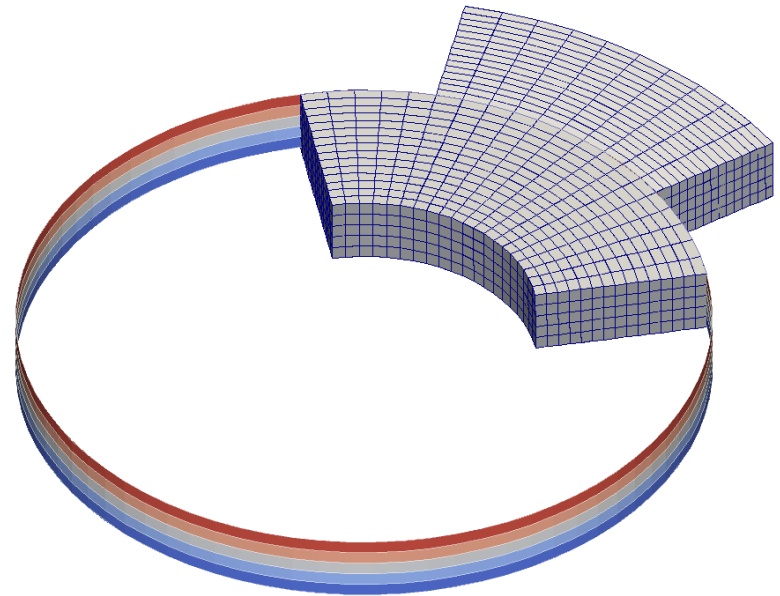

## MIXING PLANE

[www.iconCFD.com](http://www.iconCFD.com)

### ● Mixing Plane Interface

- Turbo-machinery simulations in steady-state
- Couples rotor and stator mesh regions at rotationally symmetric interface
- Circumferential averaging of fields (area or flux weighted)
- Matrix-coupled mesh interface
- Used in combination with
  - Multiple Reference Frame (MRF) in rotating domain
  - Periodic cyclicAMI boundaries

# iconCFD CORE

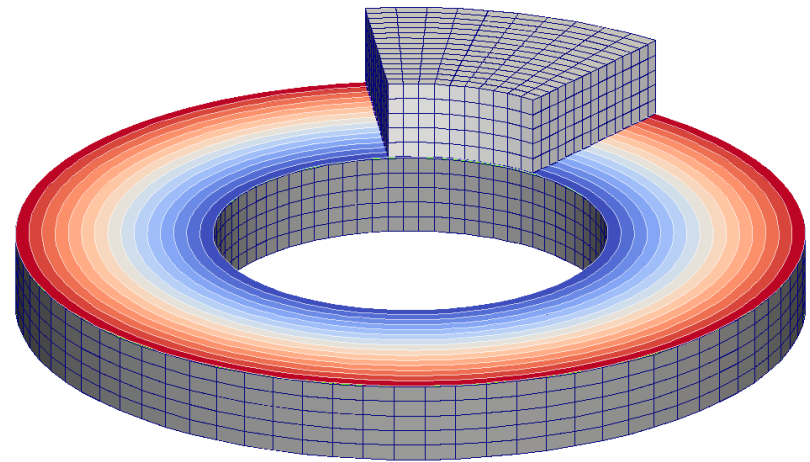

## MIXING PLANE

[www.iconCFD.com](http://www.iconCFD.com)

### ● Mixing Plane Interface

- Couples rotor and stator mesh regions at rotationally symmetric interface
- Circumferential averaging of fields (area or flux weighted)
- Matrix-coupled mesh interface
- Used in combination with
  - Multiple Reference Frame (MRF) in rotating domain
  - Periodic cyclicAMI boundaries

# iconCFD CORE

## TURBULENCE ENHANCEMENTS

[www.iconCFD.com](http://www.iconCFD.com)

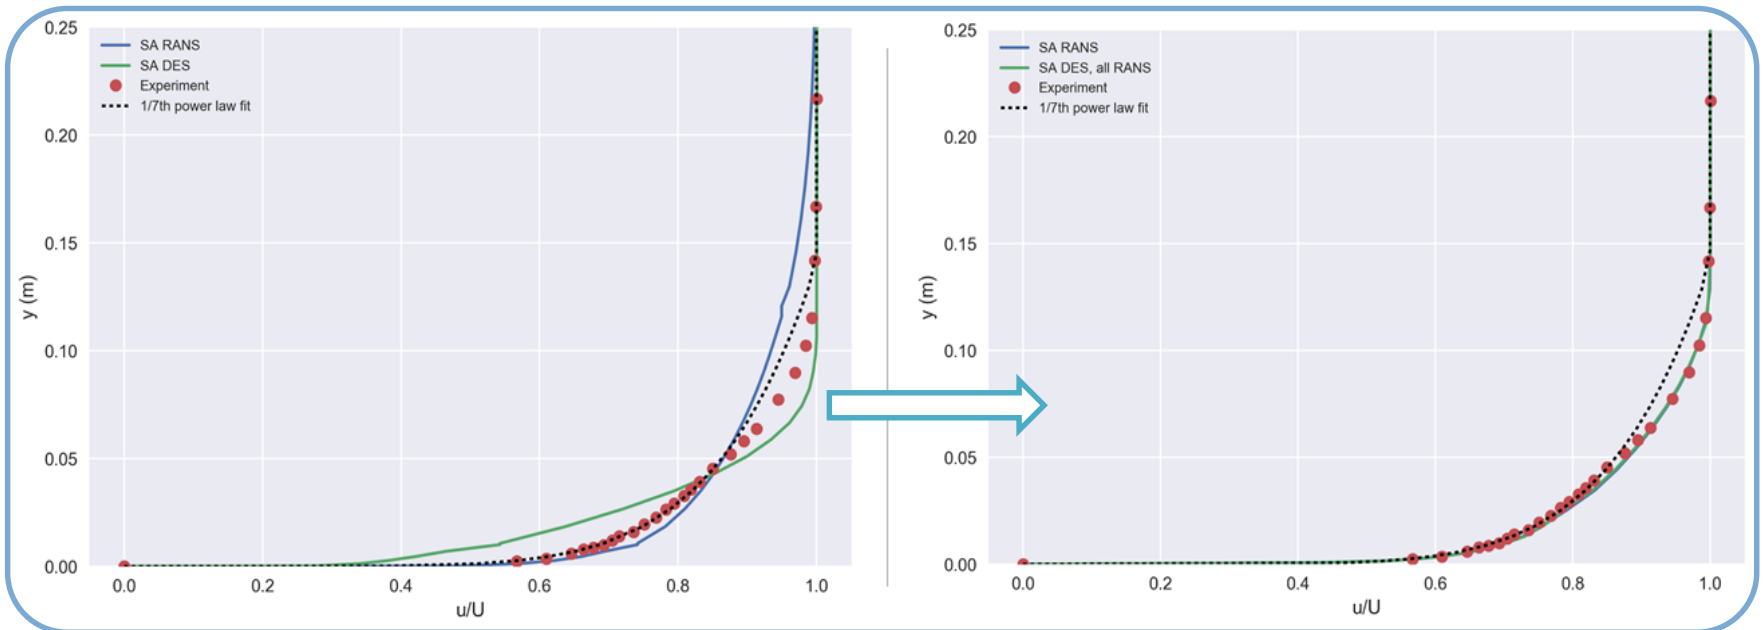

### Spalart Allmaras DES:

#### Enhancements:

- Explicit specification of RANS zones
- Corrections to S-term

#### Results:

- Corrected boundary layer profiles
- Avoided grid-induced separation

# iconCFD CORE

## TURBULENCE ENHANCEMENTS

[www.iconCFD.com](http://www.iconCFD.com)

#### — Results:

- Corrected boundary layer profiles
- Avoided grid-induced separation

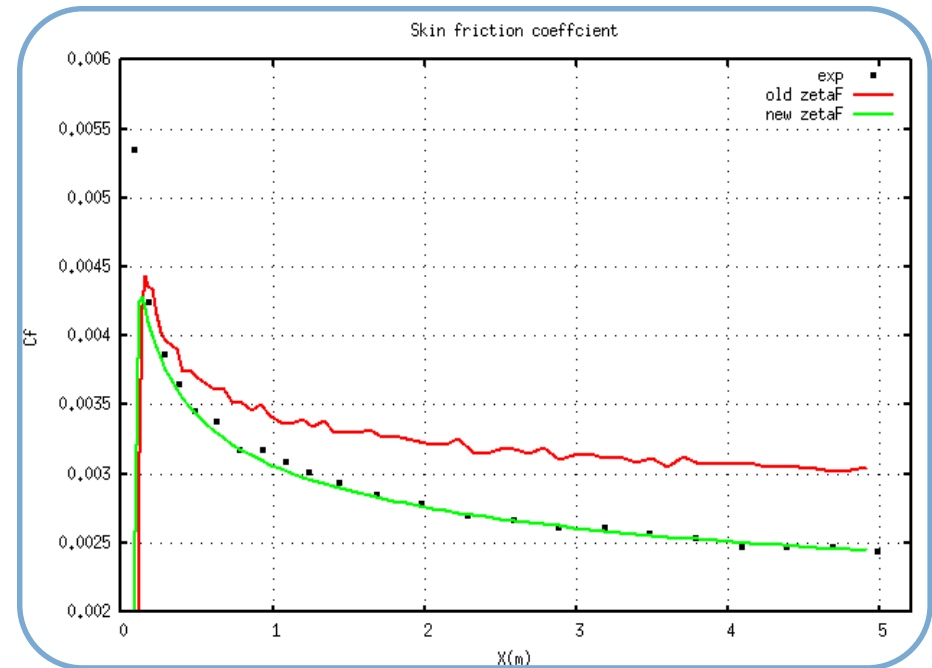

# iconCFD CORE

## TURBULENCE ENHANCEMENTS

[www.iconCFD.com](http://www.iconCFD.com)

- URANS Zeta-F improvements:
  - Proving beneficial to external vehicle aerodynamics simulations
- New kOmegaSST models:
  - kOmegaSST DES, DDES, IDDES
- DES hybrid convection scheme
  - For hybrid RANS/LES calculations
  - Blends between two convection schemes based on wall distance, velocity gradient and eddy viscosity

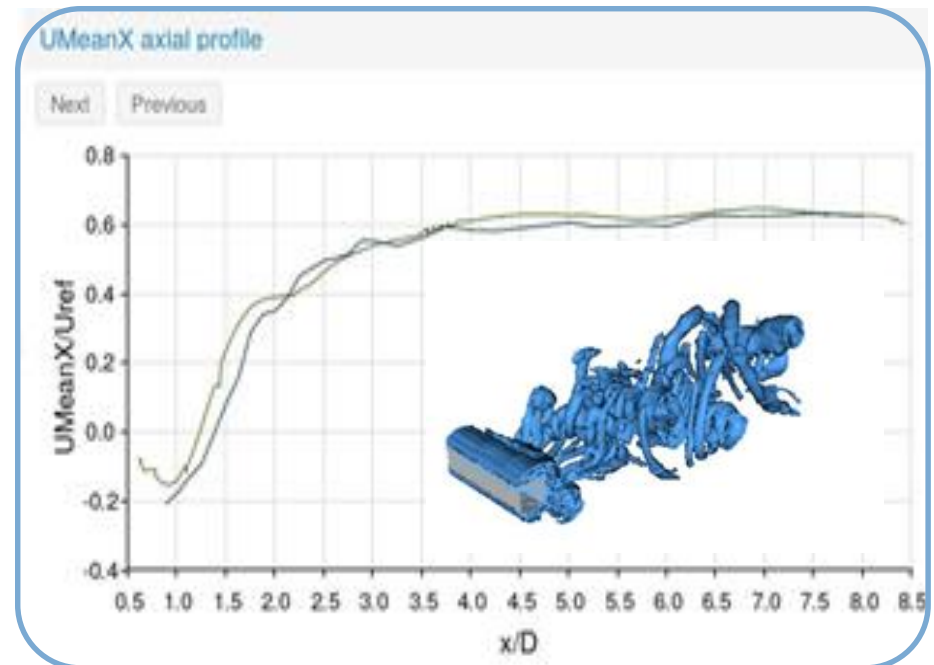

# iconCFD CORE

# iconCFD MOVE

## DYNAMIC LOCAL RE-MESHING

[www.iconCFD.com](http://www.iconCFD.com)

- Dynamic local re-meshing algorithm
  - Seamless re-meshing in solver run
  - Global or local re-meshing
  - Conservative field mapping
  - Fully automated and parallelized
  - Surface geometry updated based on
    - Patch faces
    - Surfaces moved with patches
  - Cell zones for
    - Frozen points
    - Prescribed movements

Full opening and closing of gaps

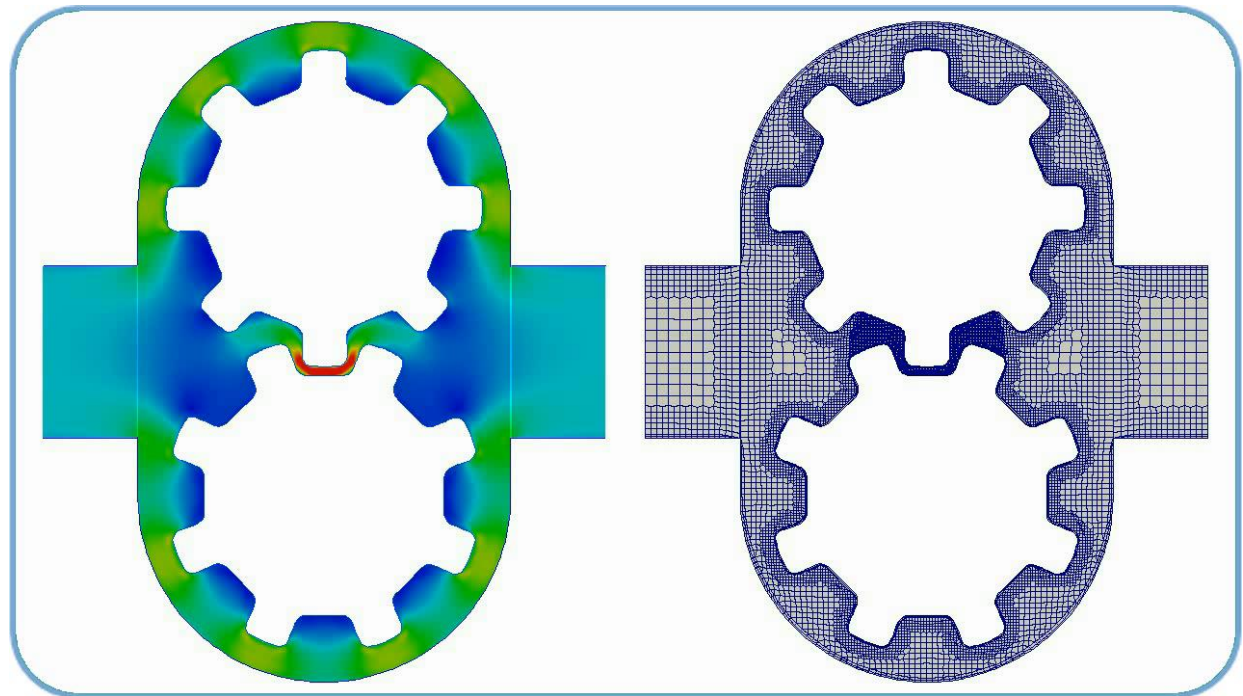

# iconCFD MOVE

## DYNAMIC LOCAL RE-MESHING

[www.iconCFD.com](http://www.iconCFD.com)

- Dynamic local re-meshing algorithm
  - Seamless re-meshing in solver run
  - Global or local re-meshing
  - Conservative field mapping
  - Fully automated and parallelized
  - Surface geometry updated based on
    - Patch faces
    - Surfaces moved with patches
  - Cell zones for
    - Frozen points
    - Prescribed movements

Intersecting paths

# iconCFD MOVE

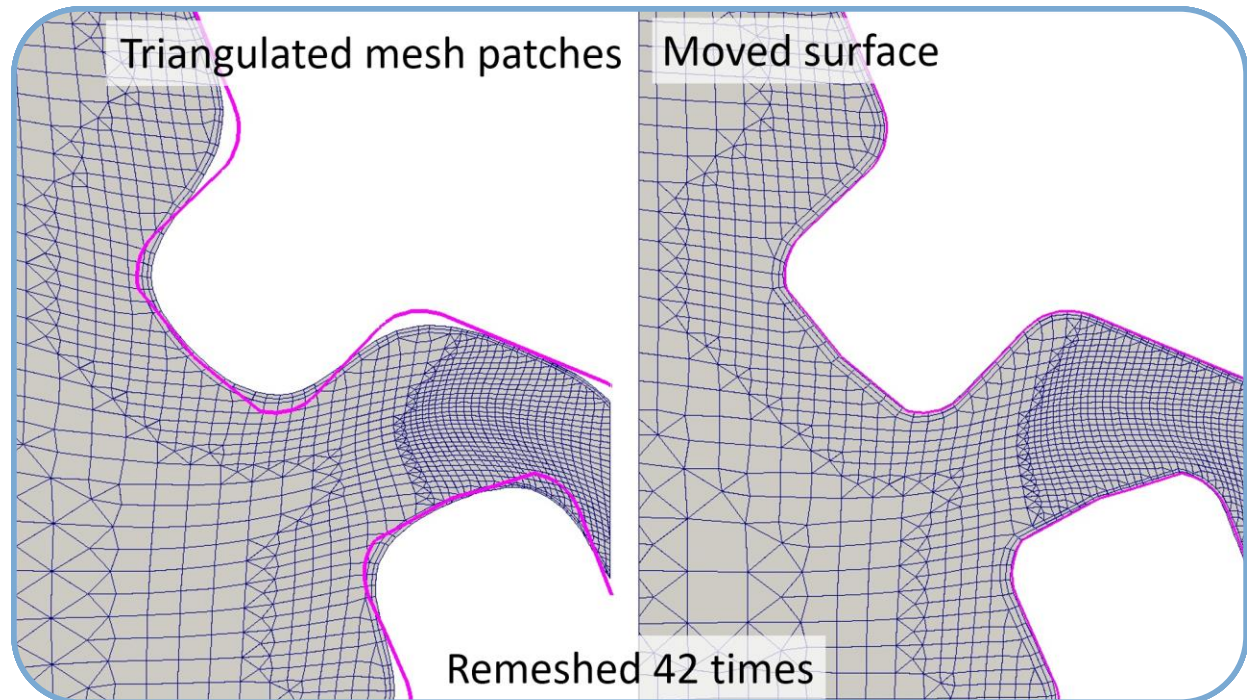

## DYNAMIC LOCAL RE-MESHING

[www.iconCFD.com](http://www.iconCFD.com)

### ● Dynamic local re-meshing algorithm

- Seamless re-meshing in solver run
- Global or local re-meshing
- Conservative field mapping
- Fully automated and parallelized
- Surface geometry updated based on
  - Patch faces
  - Surfaces moved with patches
- Cell zones for
  - Frozen points
  - Prescribed movements

- Dynamic local re-meshing algorithm
  - Seamless re-meshing in solver run
  - Global or local re-meshing
  - Conservative field mapping
  - Fully automated and parallelized
  - Surface geometry updated based on
    - Patch faces
    - Surfaces moved with patches
  - Cell zones for
    - Frozen points
    - Prescribed movements

Take-over simulation

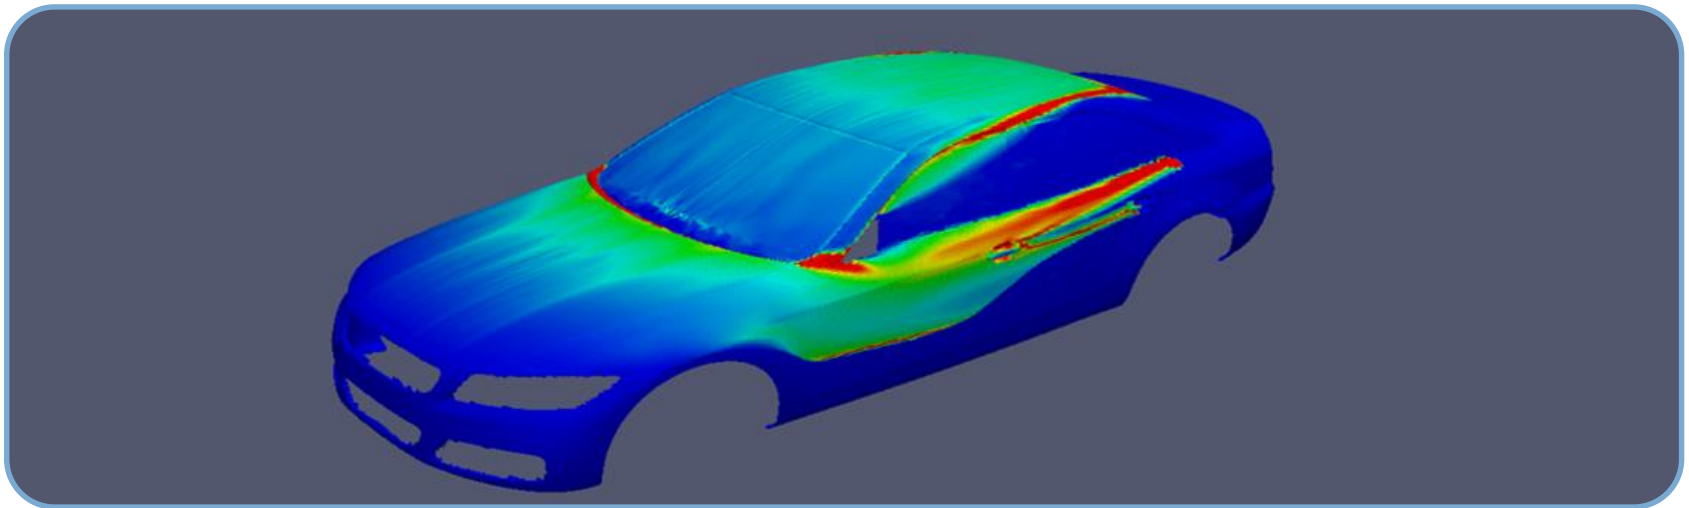

# iconCFD L2P

## SOILING

[www.iconCFD.com](http://www.iconCFD.com)

### ● Soiling simulations

- Eulerian carrier flow: steady-state or transient, turbulent, incompressible
- Lagrangian cloud transport: in frozen Eulerian solution or fully coupled
- Surface film model
  - 1-cell extrusion of surface patches
  - Velocity coupling between Eulerian and surface film regions

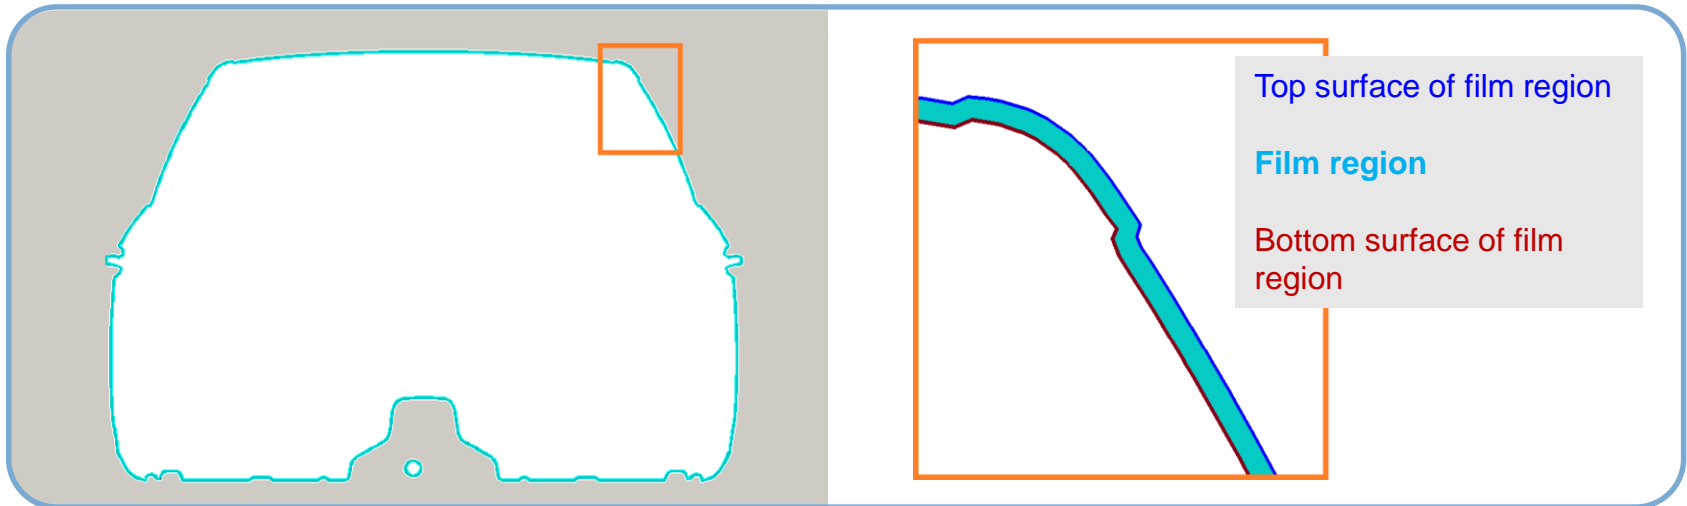

# iconCFD L2P

## SOILING

[www.iconCFD.com](http://www.iconCFD.com)

### ● Soiling simulations

- Eulerian carrier flow: steady-state or transient, turbulent, incompressible
- Lagrangian cloud transport: in frozen Eulerian solution or fully coupled
- Surface film model
  - 1-cell extrusion of surface patches
  - Velocity coupling between Eulerian and surface film regions

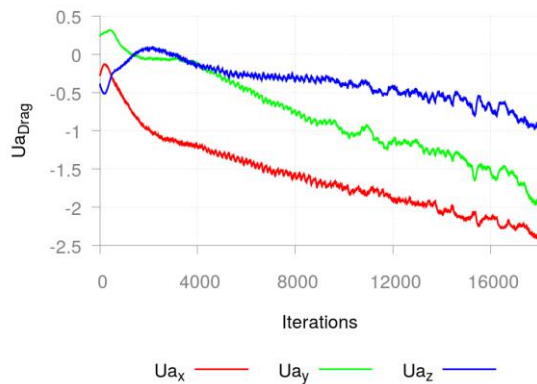

# iconCFD OPTIMIZE

## EXTERNAL AERO

[www.iconCFD.com](http://www.iconCFD.com)

- Local damping of ATC term
  - Much better convergence of adjoint equations
  - Symmetrical sensitivity field
  - Better optimization reached
- 2<sup>nd</sup> order adjoint discretization
  - Same schemes for primal and adjoint

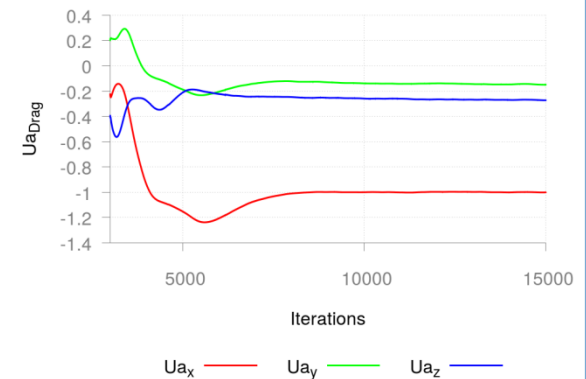

Ua probe in back of fully resolved car for aerodynamic drag optimization

Without ATC damping, 1<sup>st</sup> order

With ATC damping, 1<sup>st</sup> order

With ATC damping, 2<sup>nd</sup> order

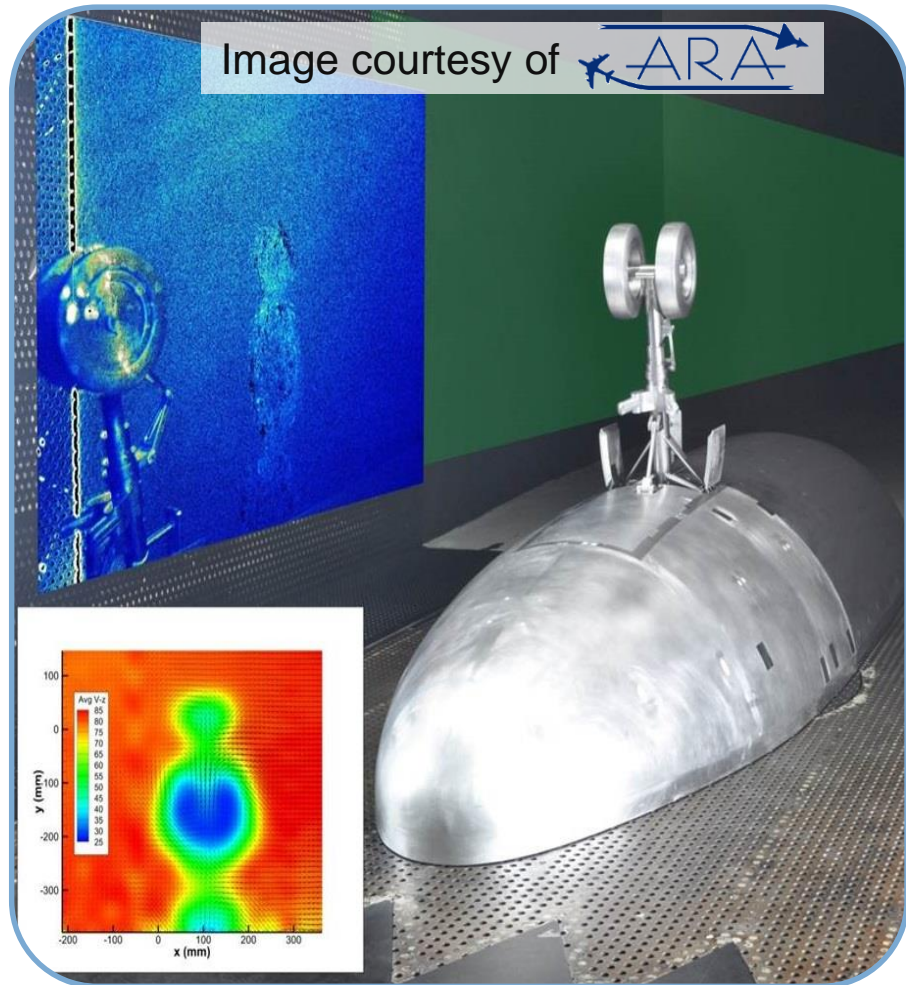

# iconCFD TRANSONIC

## NEW MODULE

[www.iconCFD.com](http://www.iconCFD.com)

[www.ara.co.uk](http://www.ara.co.uk)

- Collaboration between ICON and Aircraft Research Association (ARA).
- Transonic solver
  - Implicit, block-coupled, density based
  - Semi-implicit RANS turbulence modelling
- Validation case: Onera M6
  - Swept, semi-span wing
  - Mach: 0.8395
  - Reynolds Number: 11.72 E+6
  - Angle of Attack: 3.06 deg
  - Structured C-H grid: 884736 cells
  - Important phenomenon:  $\lambda$ -shock
    - Two shocks meet close to 85% of wing span
    - Well captured with iconCFD

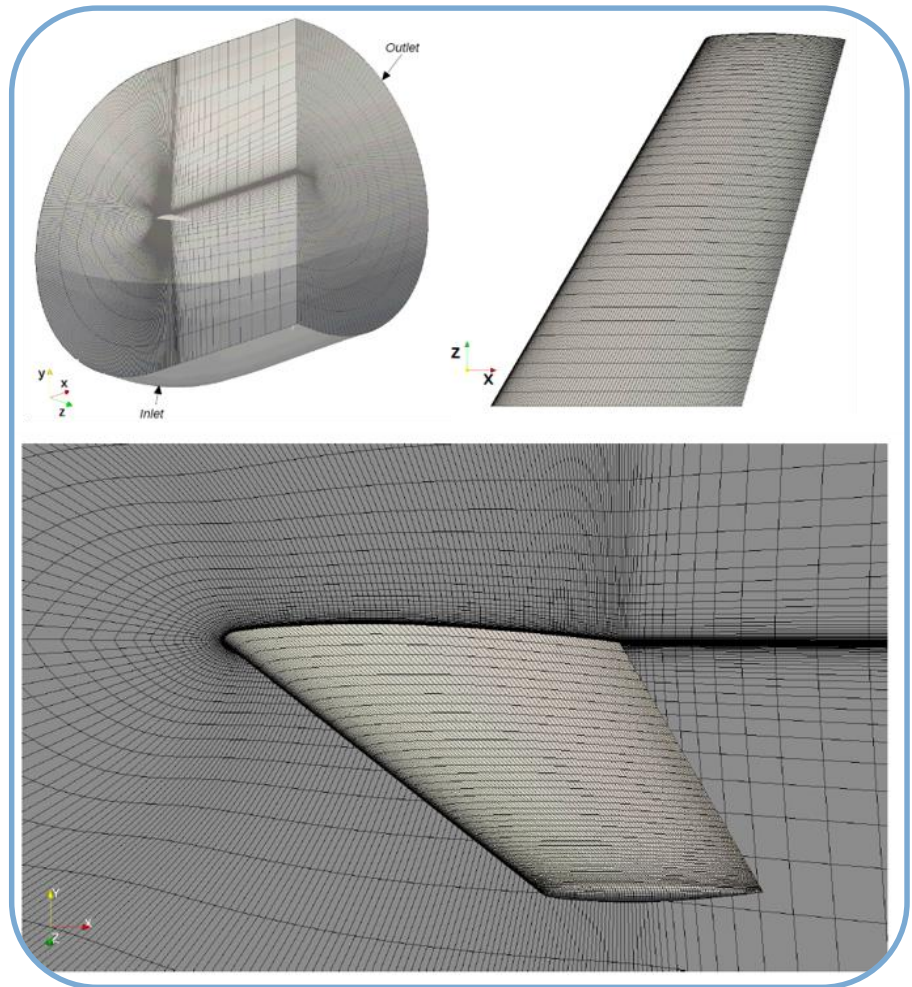

# iconCFD TRANSONIC

## NEW MODULE

## NEW MODULE

[www.iconCFD.com](http://www.iconCFD.com)
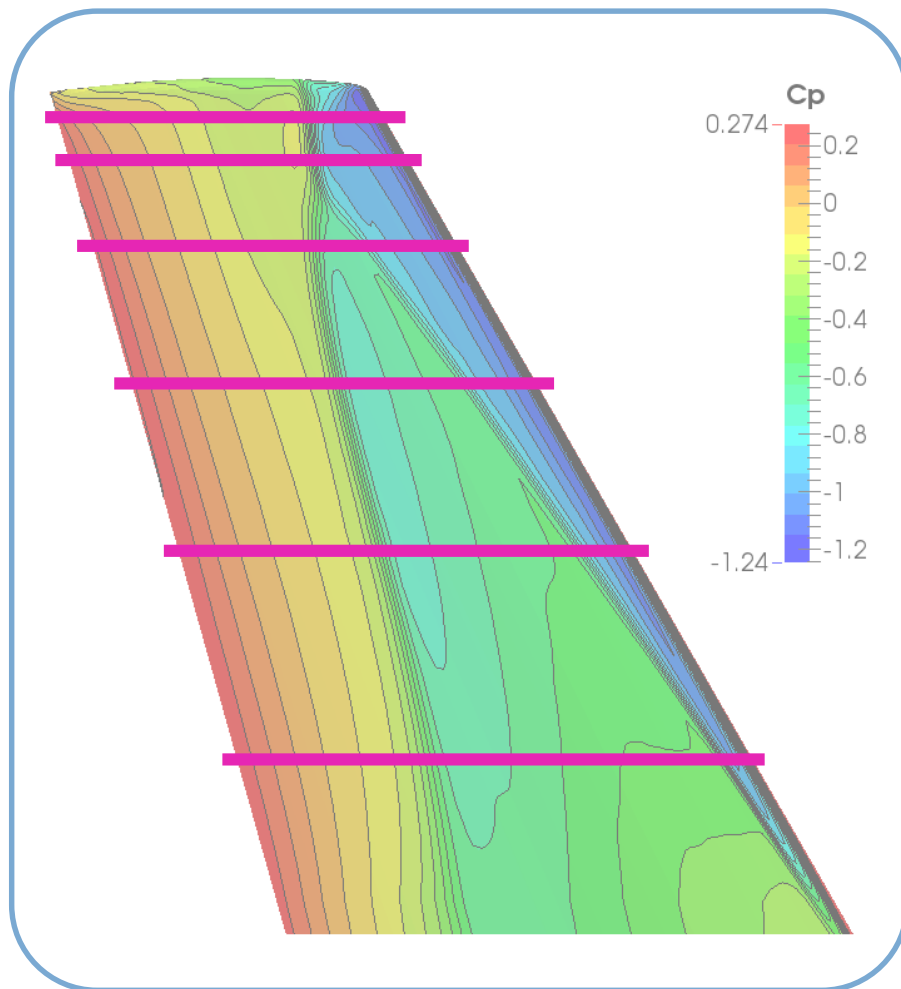

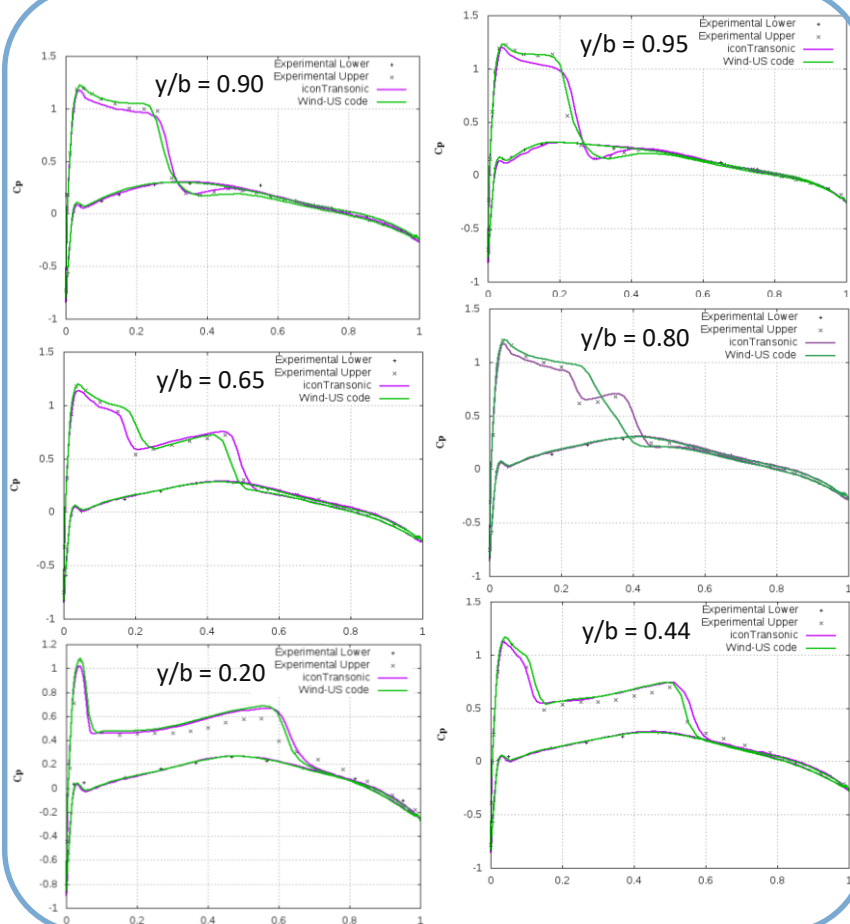

[www.ara.co.uk](http://www.ara.co.uk)

# iconCFD v4.0

## AGENDA

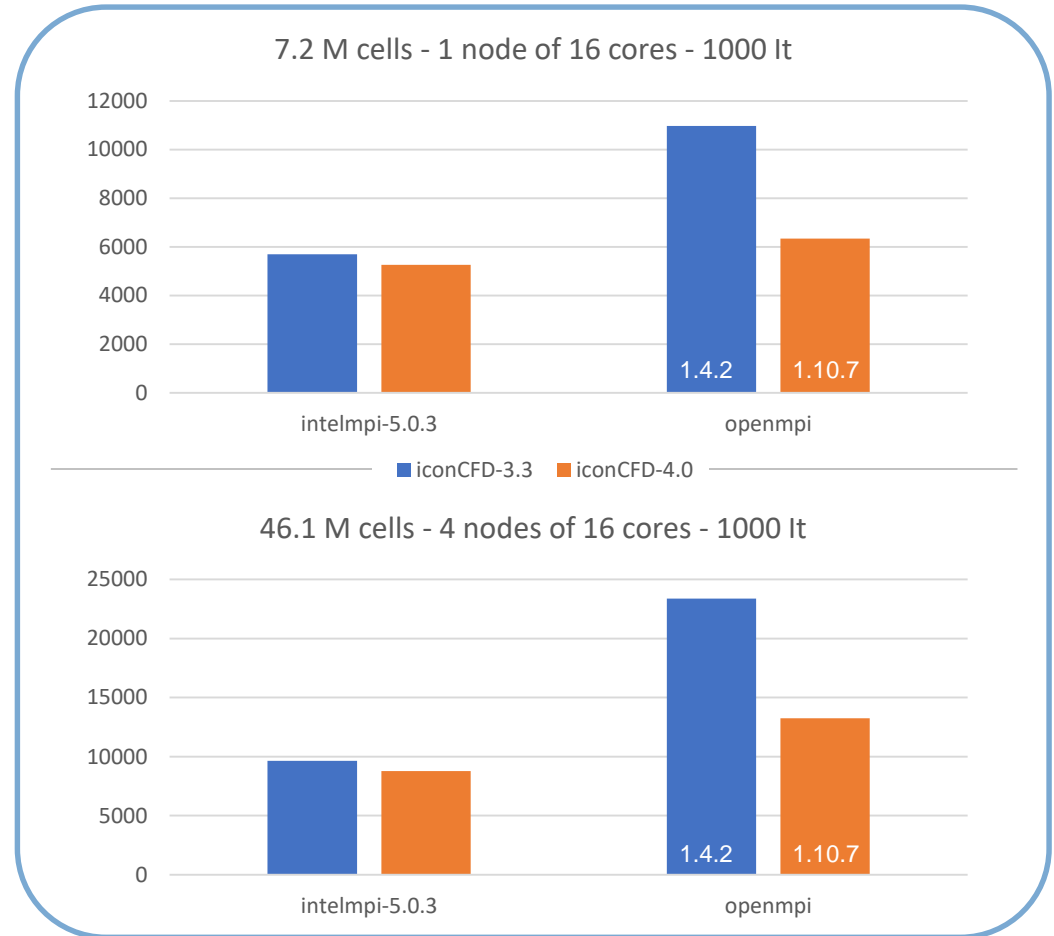

# iconCFD

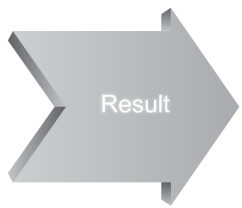

## THIRD-PARTY UPGRADES

[www.iconCFD.com](http://www.iconCFD.com)

### ● Code performance upgrades

- Openmpi upgrade
  - From openmpi-1.4.2
  - To openmpi-1.10.7

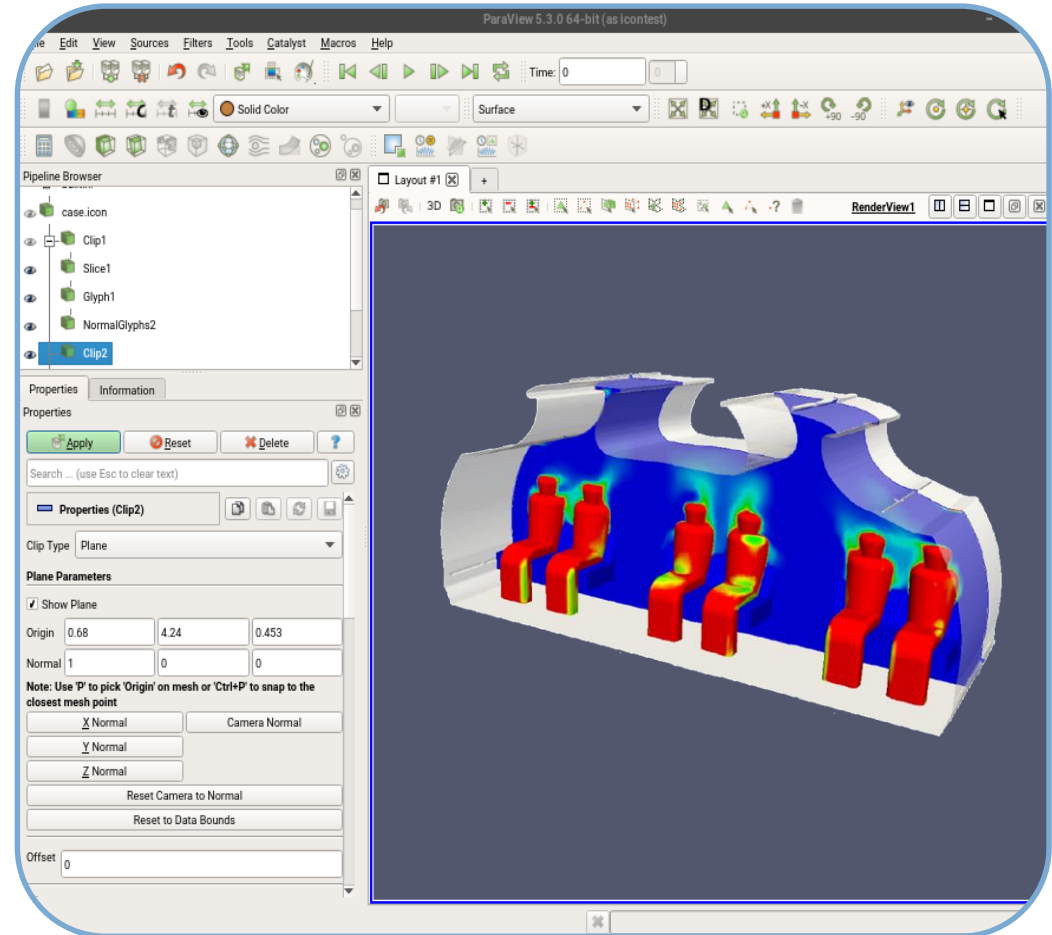

# iconCFD

## THIRD-PARTY UPGRADES

[www.iconCFD.com](http://www.iconCFD.com)

- Upgrade to ParaView 5.3
  - Previously 4.1, only server
  - One build with OpenGL 2 and Mesa:
    - Uses GPUs and CPU
    - Considerably faster
    - Server, Python API and client
  - Second build with OSMesa:
    - For off-screen rendering on clusters without GPUs
    - Server and Python API
    - Use python scripts or remote-connect with client

# THANK YOU
